

Post Trade Confirmation System (PTCS)

MESSAGE DICTIONARY

V.1.1 OCTOBER 2025

EURONEXT SECURITIES

Summary

1. General.....	11
1.1. Scope of the Document.....	11
1.2. Validity	11
1.3. References	11
1.4. Glossary	11
1.5. Messages Content and Structure	13
1.6. Messages Conventions applied	14
2. Messages.....	19
2.1. MT502 - Agreement	19
2.2. MT503 - Refusal.....	21
2.3. MT510 - Transaction Notice	23
2.4. MT541 - Market Member, Indirect participant, Alignment Notice	34
2.5. MT551 - Forced Refusal	47
2.6. MT552 - Deputising Member Alignment Notice	49
2.7. MT553 - Liquidation Account Statement	63
2.8. MT584 - Daily Report.....	68
2.9. MT595 - Error Message	70
3. Field Descriptions.....	73
3.1. Access to automatic securities loans	73
3.2. Participant account structure data 4 (free field)	73
3.3. Accrued interest amount	73
3.4. Accrued interest duration	74
3.5. Accrued interest percentage.....	74
3.6. Accrued interest sign.....	75
3.7. Allocation reference	75
3.8. Amount.....	75
3.9. Amount sign	76
3.10. Application routing code.....	77
3.11. Balance settlement date	77
3.12. Block reference.....	77
3.13. Brokerage amount	78

3.14. Brokerage rate	78
3.15. Credited participant code in currency 1	78
3.16. Credited participant code in currency 2	79
3.17. Debited participant code in currency 1	79
3.18. Debited participant code in currency 2	79
3.19. Client reference	80
3.20. Comments	80
3.21. Comments field.....	80
3.22. Commission amount	81
3.23. Conditional delay maturity date.....	81
3.24. Contested field number	82
3.25. Counterparty participant code	82
3.26. Credited security code	83
3.27. Currency 1 latest balance	83
3.28. Currency 1 latest balance after adjustment	84
3.29. Currency 1 new balance	84
3.30. Currency 2 latest balance	85
3.31. Currency 2 latest balance after adjustment	85
3.32. Currency 2 new balance	86
3.33. Currency code.....	86
3.34. Day's aligned trades currency 1 balance	86
3.35. Day's aligned trades currency 1 balance after adjustment	87
3.36. Day's aligned trades currency 2 balance	88
3.37. Day's aligned trades currency 2 balance after adjustment	88
3.38. Day's aligned trades securities balance	89
3.39. Day's aligned trades securities balance after adjustment.....	90
3.40. Day's date	90
3.41. Debited security code	91
3.42. Department code	91
3.43. Deferred payment commission amount	92
3.44. Deferred payment commission rate.....	92
3.45. Direct principal client name	92
3.46. Electronic invoice indicator.....	93
3.47. Electronic invoicing identifier code	93

3.48. Error code.....	93
3.49. Error description.....	94
3.50. Error issue date	94
3.51. Exchange rate.....	94
3.52. Execution reference.....	95
3.53. Execution type.....	95
3.54. Fee details	95
3.55. File reference	96
3.56. Generated transaction reference	97
3.57. Gross amount	97
3.58. Participant account structure data 3 (free field)	98
3.59. Indexed price indicator	98
3.60. Indexing rate.....	98
3.61. Indexing ratio.....	99
3.62. Indexing ratio sign	99
3.63. Intended settlement date	99
3.64. Intermediary account number	100
3.65. Intermediary authorised agent code	100
3.66. Intermediary beneficiary account.....	101
3.67. Intermediary code	101
3.68. Intermediary final beneficiary	101
3.69. Intermediary local authorised agent account	102
3.70. Intermediary local authorised agent identification	102
3.71. Intermediary place of settlement	103
3.72. Intermediary sub-agent identification	103
3.73. Internal reference	103
3.74. Invoice beneficiary	104
3.75. Invoice beneficiary codification type	104
3.76. Invoice final beneficiary	104
3.77. Invoicee intra-community VAT number	105
3.78. Invoicing type	105
3.79. Issue date	105
3.80. Last balance date	106
3.81. Latest securities balance	106

3.82. Local authorised agent	107
3.83. Local authorised agent codification type	107
3.84. Market member authorised agent code	107
3.85. Market member code	108
3.86. Market member fee amount (tax incl.)	108
3.87. Market member fee amount (tax not included)	109
3.88. Matching references	109
3.89. Matching type code.....	110
3.90. Modification request	110
3.91. Movement reference.....	110
3.92. Movement type code.....	111
3.93. Number of agreements received by the management institution	112
3.94. Number of agreements sent by the management institution	112
3.95. Number of day's errors.....	112
3.96. Number of day's transaction notices	113
3.97. Number of indirect participant adjustment notices.....	113
3.98. Number of movements sent to settlement.....	113
3.99. Number of pre-accepted transaction notices received by the participant 114	
3.100. Number of pre-accepted transaction notices sent by the participant	114
3.101. Number of refusals received by the management institution.....	115
3.102. Number of refusals sent by the management institution	115
3.103. Number of transaction notices kept without answer	115
3.104. Number of transaction notices held without answer from the previous day	116
3.105. Number of transactions not sent to Settlement	116
3.106. Order date	117
3.107. Order quantity	117
3.108. Order type	117
3.109. Original sender ID	118
3.110. Original transaction	118
3.111. Original transaction notice reference	119
3.112. Original transaction code.....	119
3.113. Original transaction reference	120
3.114. Participant code	120

3.115. Payment amount 1	121
3.116. Payment amount 2	121
3.117. Payment amount in currency 1	122
3.118. Payment amount in currency 2	122
3.119. Payment amount(s)	123
3.120. Place of settlement identification	123
3.121. Place of trade	123
3.122. Place of trade identification	124
3.123. Quantity sign	124
3.124. Quantity unit	125
3.125. B1: Sender ID	125
3.126. B2: Transaction reference	126
3.127. B3: Receiver ID	126
3.128. B4: Sender type	127
3.129. B5: Transaction code	127
3.130. Refusal reason code	128
3.131. Routing code	131
3.132. COMMISSION amount	131
3.133. PTCS participant code	131
3.134. Securities credited participant code	132
3.135. Securities credited account nature code	132
3.136. Securities debited participant code	132
3.137. Securities debited account nature code	133
3.138. Securities latest balance after adjustment	133
3.139. Securities new balance	134
3.140. Securities quantity	134
3.141. Security code	135
3.142. Settlement date	135
3.143. Specific user code	135
3.144. Participant account structure data 2 (free field)	136
3.145. Participant account structure data 1 (free field)	136
3.146. FTT amount	137
3.147. Tax amount 2	137
3.148. Tax amount 3	137

3.149. Time difference.....	138
3.150. Time difference sign	138
3.151. Time zone	139
3.152. Total number of transactions.....	139
3.153. Total VAT amount	139
3.154. Trade beneficiary	140
3.155. Trade beneficiary account	140
3.156. Trade beneficiary account codification type.....	141
3.157. Trade beneficiary codification type.....	141
3.158. Trade date	141
3.159. Trade mode code	142
3.160. Trade price	142
3.161. Trade price expression type.....	143
3.162. Trade rate.....	143
3.163. Trade reference	144
3.164. Trade time	144
3.165. Traded securities quantity	144
3.166. Trader beneficiary account	145
3.167. Trader counterparty	145
3.168. Trader counterparty codification type.....	146
3.169. Trader counterparty identification.....	146
3.170. Trader intra-community VAT number	146
3.171. Trader local authorised agent account.....	147
3.172. Trader local authorised agent identification	147
3.173. Trader place of settlement.....	148
3.174. Trader sub-agent identification	148
3.175. Trader BIC code.....	149
3.176. Trading capacity indicator	149
3.177. Transaction family number	149
3.178. Transaction nature	150
3.179. Transaction notice reference	150
3.180. Transaction notice type	151
3.181. Transaction reference (institution's internal	152
3.182. Transaction sequence number	152

3.183. Transaction type.....	152
3.184. Type of place of settlement	153
3.185. Type of place of trade	154
3.186. User references	154
3.187. VAT rate	154
3.188. Yield rate.....	155
4. Error Codes	156
4.1. 101 – “Rejected due to default”	156
4.2. 176 – “Transaction notices without settlement are not authorised for DSS”	156
4.3. 190 – “Invalid trading capacity indicator”	156
4.4. 191 – “Invalid order type”	157
4.5. 194 – “Invalid time difference sign”	157
4.6. 459 – “Invalid transaction nature”	158
4.7. 500 – “Account nature and security holding do not match”	158
4.8. 502 – “Incorrect issue date”	158
4.9. 505 – “Non-trading day trade date”	159
4.10. 506 – “The delay between the trade date and the issue date exceeds the authorised delay”	159
4.11. 507 – “Settlement date not numerical”	160
4.12. 508 – “Settlement date missing or a non-trading day or exceeding the maximum time limit”	160
4.13. 510 – “Settlement date not applicable, late issue”	161
4.14. 511- “Order date not numerical”	161
4.15. 512 – “Order date invalid or missing”	162
4.16. 513 – “Conditional delay maturity date not numerical”	162
4.17. 514 – “Conditional delay maturity date invalid or missing”	162
4.18. 520 – “Order quantity not numerical”	163
4.19. 521 – “Department code not numerical”	163
4.20. 522 – “Trade time not numerical”	163
4.21. 524 – “Trade price not numerical”	164
4.22. 528 – “Accrued interest percentage not numerical”	164
4.23. 529 – “Accrued interest amount not numerical”	164
4.24. 530 – “Gross amount not numerical”	164
4.25. 531 – “Trade rate not numerical”	165

4.26. 532 – “Exchange rate not numerical”	165
4.27. 533 – “Tax amount not numerical”	165
4.28. 534 – “Broker firm fee amount (tax not incl.) not numerical”	166
4.29. 535 – “Total VAT amount not numerical	166
4.30. 536 – “Settlement amount in currency 1 not numerical”	166
4.31. 539 – “Sender participant code different from market member code”	166
4.32. 540 – “Receiver participant code different from intermediary code”	167
4.33. 542 – “Accrued interest sign invalid or missing”	167
4.34. 544 – “Security not eligible in PTCS”	168
4.35. 545 – “Market member code member type not authorised”	168
4.36. 547 – “Intermediary member type not authorised”	169
4.37. 555 – “Network transaction code invalid or missing”	169
4.38. 556 – “Trade reference invalid or missing”	170
4.39. 557 – “Transaction notice reference missing”	170
4.40. 559 – “Settlement amount 1 currency code invalid or missing”	170
4.41. 562 – “Trade date currency code invalid or missing”	171
4.42. 564 – “Trade time invalid”	171
4.43. 565 – “Transaction notice type invalid or missing”	172
4.44. 566 – “Original transaction type invalid or missing”	172
4.45. 567 – “Execution type invalid”	172
4.46. 568 – “Quotation price expression type invalid or missing”	173
4.47. 569 – “Order origin code invalid or missing”	173
4.48. 570 – “Order quantity = 0”	174
4.49. 571 – “Accrued interest amount and rate nil and negative coupon” .	174
4.50. 572 – “Currency 1 settlement amount sign invalid or missing”	175
4.51. 580 – “Direct order sender missing”	175
4.52. 581 – “Order origin and original transaction do not match”	176
4.53. 582 – “Transaction notice already used”	176
4.54. 583 – “Trade mode code invalid”	176
4.55. 586 – “Accrued interest currency code invalid or missing”	177
4.56. 587 – “Transaction reference missing”	177
4.57. 588 – “Gross amount currency code invalid or missing”	178
4.58. 589 – “Tax amount currency code invalid or missing”	178

4.59. 590 – “Broker firm fee amount (tax not incl.) currency code invalid or missing”	179
4.60. 591 – “Total VAT amount currency code invalid or missing”	179
4.61. 592 – “Currency 1 settlement amount sign negative and buy order”	180
4.62. 600 – “Receiver participant code different from market member code”	180
4.63. 601 – “Sender participant code different from intermediary code” ..	181
4.64. 603 – “Refusal reason code not numerical”	181
4.65. 604 – “Refusal reason code invalid or missing”	181
4.66. 606 – “Contested field number invalid or missing”	182
4.67. 609 – “Transaction notice pre-accepted”	182
4.68. 614 – “Transaction type and original transaction type do not match” ..	183
4.69. 617 – “Market member authorised agent code incorrect”	183
4.70. 700 – “Sender ID missing”	184
4.71. 707 – “Receiver ID missing”	184
4.72. 730 – “Quantity unit invalid or missing”	185
4.73. 733 – “Securities quantity = 0”	185
4.74. 734 – “Traded securities quantity not numerical”	186
4.75. 736 – “Securities quantity is not a multiple of nominal value”	186
4.76. 741 – “Execution or trade date not numerical”	186
4.77. 758 – “COMMISSION amount not numerical”	187
4.78. 780 – “Invalid security code”	187
4.79. 900 – “The message could not be parsed”	187
4.80. 910 – “Number of postponements exceeding the maximum limit” ...	188
4.81. 930 – “Invalid Link for Broker and Custodian”	188
4.82. 999 – “Trade reference already used for this sender”	188

1. General

1.1. Scope of the Document

This document outlines the message structures and guidelines associated with the Post Trade Confirmation System (PTCS) platform.

Specifically, it details all the fields included in MT proprietary messages used for these purposes, along with their formal rules, errors and fields descriptions content.

1.2. Validity

This document is valid exclusively for Euronext Securities Milan.

1.3. References

1.4. Glossary

Below is a definition of terms used in the document. If not otherwise specified:

- All times used in this document are in Central European Time (CET);

Terms	Definitions
AC	Acronym for French term "achat au comptant": a security buy to be settled on the trade date + 2
ARM	Acronym for French term "achat au service à règlement différé": a deferred settlement buy transaction
ARP	Acronym for French term "achat reporté (report là-bas)": opening of a new Deferred Settlement Service buy position for the next month, following the rollover of a position
Cash orders	Orders made by an executing party on ISINs that are in the scope of the PTCS service but are not eligible for the Deferred Settlement Service (DSS). They are settled on T+2

Terms	Definitions
Corporate action	An event initiated by a public company that brings or could bring an actual change to the securities issued by the company. Corporate actions are typically approved by the company's board of directors and authorised by the shareholders
DSS	Deferred Settlement Service, used to identify orders that are done by an executing party on an ISIN eligible for the DSS service. The settlement is expected at end of month on L+2
EOD	End of Day
EOM	End of Month
Ex-date	Date from which the Underlying Security is traded <u>executed</u> without the attached benefit/right to participate in a corporate event
FOP	Free of Payment: a delivery of securities free of payment, i.e., which is not linked to a corresponding transfer of funds
ICP	Indirectly Connected Party: party with an indirect connection to the T2S platform
ISD	Intended Settlement Date. This date corresponds to: • for Transaction Notices for immediate settlement, this is the Settlement Date entered in the Transaction Notice; • for Transaction Notices for DSS (Deferred Settlement Service), this is the last open date in the month.
Liquidation day (L)	Liquidation Day (L) is the last business day of a trading month
Market claim	A market claim is a process in the securities market that occurs when there is a discrepancy between the entitlement of securities or cash and the actual holdings due to a corporate action. This usually happens when a corporate action, such as a dividend payment or stock split, is announced, but the securities have been traded and settled in the market before the entitlement is distributed
Mandatory event	Mandatory events are corporate actions that affect all shareholders in a company, and participation is not optional. Shareholders do not have a choice in whether to participate, as these events automatically apply to all shares. Examples of mandatory events include Cash Dividends, Stock Splits, M&A, Spin-Offs
NTS	Night Time Settlement

Terms	Definitions
Payment date	Date on which a payment related to a corporate action is due
PFOD	Payment Free of Delivery: a payment which is not linked to a corresponding movement of securities
PSET	Place of Settlement
PTCS	Post-Trade Confirmation System (also the name of the Euronext tool providing this service)
Record date	Date/time at which positions are finalised at the end of the day to determine which parties are entitled to receive proceeds in a corporate event
RPA	Acronym for French term "report d'achat (report ici)": the closure of previous DSS buy position before the rollover of a position
RPV	Acronym for French term "report de vente (report ici)": the closure of previous DSS sell position before the rollover of a position
T2S	TARGET2-Securities
VC	Acronym for French term "vente au comptant": a security sell to be settled on the trade date +2 (T+2)
VRM	Acronym for French term "vente au service à règlement différé": a deferred settlement sell transaction
VRP	Acronym for French term "vente reportée (report là-bas)": the opening of new deferred settlement sell position on the next month, following the rollover of a position.

1.5. Messages Content and Structure

Each message is identified by a three-digit numerical reference preceded by the acronym MT, which stands for 'Message Type'. This identification does not adhere to any coding or standardised principles; hence, none of the three digits in the numerical reference hold any particular significance.

Each message must conform to the following structure:

- a heading, shared by all the messages circulating on the network

- a specific application part which makes up the body of the transaction.

1.6. Messages Conventions applied

The shared part of all the messages is composed of five blocks designated B1 to B5:

- **B1:** SENDER IDENTIFICATION (mandatory block)
- **B2:** TRANSACTION REFERENCE (mandatory block)
- **B3:** RECEIVER IDENTIFICATION (mandatory block)
- **B4:** TYPE OF SENDER (optional block)
- **B5:** TRANSACTION CODE (mandatory block).

How to compile these blocks is detailed in the corresponding sections in chapter 3 – 'Field Descriptions'.

The section detailing the application of messages is found in Chapter 2, titled 'Messages'.

The content of these messages must adhere to the general guidelines outlined below.

Fields must be aligned according to their format as follows:

Field Alignments / Applied Standards		
Alphanumeric (AN)	Type	Align to the left, filling the right with spaces. Optional fields of this type that are not filled should remain blank.
Alphabetical Type (A)		Align to the left, filling the right with spaces. Optional fields of this type that are not filled should remain blank.
Numerical Type (N)		Align to the right, filling the left with zeros. Optional fields of this type that are not filled should start with zero.
Dates Following ISO 2014 standards		Dates should be in the YYYYMMDD format. These digital fields must start with zero if not filled.
Time		Time should be in the HHMMSS format. These digital fields must start with zero if not filled.
Amounts, Quantities, and Rates		These are expressed without decimal points, spaces, or commas and are never signed. Amounts linked to a currency code are expressed with the number of decimals

as per the currency (ISO 4217 standard). However, when greater precision is needed, a 'format' attribute is used, allowing for more decimals than the currency standard. The 'format' attribute takes precedence in such cases.

Codes Composition

Institution Code	This code uses twelve alphanumeric characters, formatted as: 4 zeros + ex-member code (8 numerical positions).
Participant Code	This code uses eight numerical characters. It is populated with the CED code of the Participant (Please refer to Euronext Securities Milan back-office for any query on this matter).
Security Code	This code uses twelve alphanumeric characters, applicable only to the ISIN, assigned by the authorised National Numbering Agency.
Currency Code	This code conforms to ISO 4217, using 3 alphanumeric characters.

NOTE: The only exception to the above rules for dates and time is the 'Timestamp' attribute found in Chapter 3, 'Fields Descriptions'.

1.6.1. Types of Controls Conducted

Euronext network validates messages based on and the transaction code (field B5). Validation checks are performed field by field by PTCS, following what described in this document.

1.6.1.1. Format Control

• Numerical Field:

- 1.If optional, it must be numerical but can be filled entirely with zeros.
- 2.If reserved, it must be filled entirely with zeros.
- 3.If mandatory, it must be numerical and not zero.

• Alphanumeric Field:

4.If optional, it must contain alphanumerical characters.

5.If reserved, it must be filled entirely with blanks.

6.If mandatory, it must contain only alphanumerical characters and at least one non-blank character.

• **Alphabetical Field:**

7.If optional, it must contain alphabetical characters.

8.If reserved, it must be filled entirely with blanks.

9.If mandatory, it must contain only alphabetical characters and at least one non-blank alphabetical character.

The ranges of letters and numbers are provided below:

Types of characters	Possible values
Numerical	0.....9
Alphabetical	a, b,y, z, A, B....Y, Z, blank
Alphanumerical	0.... 9, a, b,.....y, z, A, B,....Y, Z, blank, +, -, etc.

1.6.1.2. Application validation

This validation may be carried out when the transactions are received and/or during the processing of the transactions by the various sub-systems.

There are two kinds of application validation:

1.6.1.3. Validation at reception

This validation is carried out when a transaction is received and validates the:

- presence of required fields,
- respect of format rules (numbers, letters, etc.) for all fields filled in whether by requirement or by choice, and
- respect for the interdependence of attributes rules.

Transactions that do not conform to these rules are immediately rejected.

1.6.1.4. Validation against the PTCS Referential

This validation is carried out when the transaction is received and renewed on a daily basis. The objective is to verify the validity of the transaction against the most recent version of the PTCS databases (modifications of some reference data are managed in the 'archive' section).

This validation is especially for the:

- Sender ID information
- Receiver ID information
- Security Code (ISIN)
- Currency Code (EUR)

List of messages in PTCS scope

Reference	Purpose of the message
MT502	Agreement
MT503	Refusal
MT510	Transaction notice
MT541	Market Member, indirect participant, alignment notice
MT551	Forced refusal
MT552	Deputising member alignment notice
MT553	Liquidation account statement
MT584	Daily report
MT595	Error message

PTCS flows Diagram:

For more details on this process flow, please refer to the PTCS service description document

2. Messages

2.1. MT502 - Agreement

The message MT502 conveys the following type of transaction:

B5 Transaction Code "BBACC": Agreement

This message communicates the agreement on a transaction notice, and is transmitted by an Intermediary to a Market Member.

COMMON FIELDS (Heading)

N°	Attribute	Length	Type	Mandatory/ Optional
1	B1: Sender ID			
	Participant code	0008	N	Mandatory
	Specific user code	0005	X	Mandatory
	Application routing code	0003	X	Mandatory
2	B2: Transaction reference	0016	X	Mandatory
3	B3: Receiver ID			
	Participant code	0008	N	Mandatory
	Specific user code	0005	X	Mandatory
	Application routing code	0003	X	Mandatory

25	Reserved zone	0050	X	Optional – no controls applied by PTCS

2.2. MT503 - Refusal

The message MT503 conveys the following type of transaction:

B5 Transaction Code "BBREF": Refusal

This message communicates the refusal of a transaction notice, and is transmitted by an Intermediary to a Market Member.

COMMON FIELDS (Heading)

N°	Attribute	Length	Type	Mandatory/ Optional
----	-----------	--------	------	---------------------

1	B1: Sender ID			
	Participant code	0008	N	Mandatory
	Specific user code	0005	X	Mandatory
	Application routing code	0003	X	Mandatory
2	B2: Transaction reference	0016	X	Mandatory
3	B3: Receiver ID			
	Participant code	0008	N	Mandatory
	Specific user code	0005	X	Mandatory
	Application routing code	0003	X	Mandatory
4	B4: Sender type	0001	A	Optional – no controls applied by PTCS
5	B5: Transaction code	0005	X	Mandatory

OPERATION FIELDS (Body)

N°	Attribute	Length	Type	Mandatory/ Optional
Transaction notice identifier				
6	Market member code	0008	N	Mandatory
7	Intermediary code	0008	N	Mandatory
8	Transaction notice reference	0016	X	Mandatory
9	Trade reference	0016	X	Mandatory
Rejection justification				

10	Refusal reason code	0002	N	Mandatory
11	Contested field number	0002	X	Optional – no controls applied by PTCS
12	Modification request	0023	X	Optional – no controls applied by PTCS
13	Comments field	0050	X	Optional – no controls applied by PTCS
14	Reserved field	0030	X	Optional – no controls applied by PTCS

2.3. MT510 - Transaction Notice

The message MT510 conveys the following type of transaction:

B5 Transaction Code "BBAO": Transaction notice

This message describes the details of a stock exchange transaction sent by a Market Member to an Intermediary or, for a pre-accepted transaction notice, by an Intermediary to a Market Member.

COMMON FIELDS (Heading)

N°	Attribute	Length	Type	Mandatory/ Optional
1	B1: Sender ID			
	Participant code	0008	N	Mandatory
	Specific user code	0005	X	Mandatory
	Application routing code	0003	X	Mandatory
2	B2: Transaction reference	0016	X	Mandatory

3	B3: Receiver ID			
	Participant code	0008	N	Mandatory
	Specific user code	0005	X	Mandatory
	Application routing code	0003	X	Mandatory
4	B4: Sender type	0001	A	Optional – no controls applied by PTCS
5	B5: Transaction code	0005	X	Mandatory

OPERATION FIELDS (Body)

2.4. MT541 - Market Member, Indirect participant, Alignment Notice

The message MT541 conveys the following type of transaction:

B5 Transaction Code "BBANP": Market Member, indirect participant, agreement notice

The 'Market Member, indirect participant, alignment notice' message, produced by the PTCS sub-system, informs the Market Member Authorised Agent, indirect participant, of the agreement, explicit or forced, of a transaction notice sent by the Market Member, indirect participant, for which it takes care of the clearing.

If this message has been created following the matching of the transaction notice without settlement (transaction nature 'S'), it represents an instruction given by the indirect participant to its authorised agent so that the authorised agent introduces the transaction of settlement.

COMMON FIELDS (Heading)

N°	Attribute	Length	Type	Mandatory/ Optional
1	B1: Sender ID			
	Participant code	0008	N	Mandatory
	Specific user code	0005	X	Mandatory
	Application routing code	0003	X	Mandatory
2	B2: Transaction reference	0016	X	Mandatory
3	B3: Receiver ID			

N°	Attribute	Length	Type	Mandatory/ Optional

2.5. MT551 - Forced Refusal

The message **MT551** conveys the following type of transaction:

B5 Transaction Code "BBCRE": Forced refusal

This message, transmitted by the PTCS sub-system to the two participants concerned (Market Member and Intermediary), communicates a refusal of a transaction notice during the processing of the transaction notices not responded to (forced procedure).

COMMON FIELDS (Heading)

N°	Attribute	Length	Type	Mandatory/ Optional
1	B1: Sender ID			
	Participant code	0008	N	Mandatory
	Specific user code	0005	X	Mandatory
	Application routing code	0003	X	Mandatory
2	B2: Transaction reference	0016	X	Mandatory
3	B3: Receiver ID			
	Participant code	0008	N	Mandatory
	Specific user code	0005	X	Mandatory
	Application routing code	0003	X	Mandatory
4	B4: Sender type	0001	A	Optional – no controls applied by PTCS
5	B5: Transaction code	0005	X	Mandatory

OPERATION FIELDS (Body)

N°	Attribute	Length	Type	Mandatory/ Optional
6	File reference	0021	X	Mandatory
Transaction notice identifier				
7	Market member code	0008	N	Mandatory

8	Intermediary code	0008	N	Mandatory
9	Transaction notice reference	0016	X	Mandatory
10	Trade reference	0016	X	Mandatory
Rejection justification				
11	Refusal reason code	0002	N	Mandatory
12	Contested field number	0002	X	Optional – no controls applied by PTCS
13	Modification request	0023	X	Optional – no controls applied by PTCS
14	Comments field	0050	X	Optional – no controls applied by PTCS
15	Reserved field	0030	X	Optional – no controls applied by PTCS

2.6. MT552 - Deputising Member Alignment Notice

The message MT552 conveys the following type of transaction:

B5 Transaction Code "BBSAF": Sub-member agreement notice

This message informs a deputising member that one of its indirect participants has been aligned and that the movement corresponding to this alignment will be presented to the settlement sub-system for entry into its securities and cash accounts.

If this message has been created following the matching of the transaction notice without settlement (transaction nature 'S'), it represents an instruction given by the indirect participant to its authorised agent so that the authorised agent introduces the transaction of settlement.

COMMON FIELDS (Heading)

N°	Attribute	Length	Type	Mandatory/ Optional
----	-----------	--------	------	---------------------

1	B1: Sender ID			
	Participant code	0008	N	Mandatory
	Specific user code	0005	X	Mandatory
	Application routing code	0003	X	Mandatory
2	B2: Transaction reference	0016	X	Mandatory
3	B3: Receiver ID			
	Participant code	0008	N	Mandatory
	Specific user code	0005	X	Mandatory
	Application routing code	0003	X	Mandatory
4	B4: Sender type	0001	A	Optional – no controls applied by PTCS
5	B5: Transaction code	0005	X	Mandatory

OPERATION FIELDS (Body)

N°	Attribute	Length	Type	Mandatory/ Optional
6	File reference	0021	X	Mandatory
Movement reference				
7	PTCS participant code	0008	N	Mandatory

2.7. MT553 - Liquidation Account Statement

The message MT553 conveys the following type of transaction:

B5 Transaction Code "BBRLQ": Liquidation account statement

This message communicates the securities and cash balance carried out on the Monthly Settlement market from the first day of liquidation, taking into account corporate actions (market claims and transformations), by security, by pair of participants, by pair of sub-accounts, by quantity unit and by theoretical settlement date.

The liquidation account statement is transmitted to the two parties concerned (Market Member and Intermediary) after each trading day after agreement, explicit or not, of the transaction notices.

This message is not sent to pure dealers and deputised members.

COMMON FIELDS (Heading)

2.8. MT584 - Daily Report

The message MT584 conveys the following type of transaction:

B5 Transaction Code "BBBQ": PTCS daily report

This message communicates a daily report of the transactions carried out by a participant during the day.

The transactions without settlement are counted together with the ordinary transactions (with settlement).

This message is transmitted by the PTCS sub-system to each participant, even if the participant did not exchange any information on that day.

COMMON FIELDS (Heading)

N°	Attribute	Length	Type	Mandatory/ Optional
1	B1: Sender ID			
	Participant code	0008	N	Mandatory
	Specific user code	0005	X	Mandatory
	Application routing code	0003	X	Mandatory

15	Number of transactions not sent to Settlement	0006	N	Optional – no controls applied by PTCS
16	Number of pre-accepted transaction notices sent by the participant	0006	N	Optional – no controls applied by PTCS
17	Number of pre-accepted transaction notices received by the participant	0006	N	Optional – no controls applied by PTCS
18	Number of transaction notices held without answer	0006	N	Optional – no controls applied by PTCS
19	Day's date	0008	N	Mandatory
Counter (previous day)				
20	Number of transaction notices held without answer from the previous day	0006	N	Optional – no controls applied by PTCS
21	Last balance date	0008	N	Optional – no controls applied by PTCS

2.9. MT595 - Error Message

The message MT595 conveys the following type of transaction:

B5 Transaction Code "ANO": Error message

When dispatched by the PTCS system, this message notifies each participant - the sender and the counterparty - that a previously sent transaction notice, agreement, or refusal was not acknowledged as valid by this preparation system.

COMMON FIELDS (Heading)

N°	Attribute	Length	Type	Mandatory/ Optional
----	-----------	--------	------	---------------------

1	B1: Sender ID			
	Participant code	0008	N	Mandatory
	Specific user code	0005	X	Mandatory
	Application routing code	0003	X	Mandatory
2	B2: Transaction reference	0016	X	Mandatory

6	Original sender ID	0016	X	Mandatory
7	Original-transaction reference	0016	X	Mandatory
8	Error issue date	0008	N	Optional – no controls applied by PTCS
9	Original-transaction code	0005	X	Mandatory
10	Blank field	0038	X	Optional – no controls applied by PTCS

11	Error code	0003	N	Mandatory
12	Error description	0080	X	Mandatory
13	Blank field	0210	X	Reserved – no controls applied by PTCS

3. Field Descriptions

3.1. Access to automatic securities loans

PTCS does not apply any control on this optional field.

This field indicates whether or not a movement can be subject to an automatic securities loan under the clearing house system of automatic margin.

Occurrences:

System	Message
PTCS	MT552 MT541

3.2. Participant account structure data 4 (free field)

PTCS does not apply any control on this optional field.

Occurrences:

System	Message
PTCS	MT552 MT553 MT502 MT510 MT541

3.3. Accrued interest amount

PTCS does not apply any control on this optional field.

This field indicates the accrued interest amount when the bond is listed in EUR.

Detail:

- Currency code
- Amount

Occurrences:

System	Message
PTCS	MT552 MT510 MT541

3.4. Accrued interest duration

PTCS does not apply any control on this optional field.

Number of days used to calculate the accrued interest.

Occurrences:

System	Message
PTCS	MT552 MT510 MT541

3.5. Accrued interest percentage

PTCS does not apply any control on this optional field.

This field indicates the nominal percentage, for the trade of an option listed in percentage of the nominal value - after deduction of the withholding tax, if applicable - which represents the accrued interest amount from the latest coupon detachment until the execution date.

The percentage allows to calculate the trade gross amount (see details of the corresponding data).

Range of values:

AMOUNT format

Note: the accrued interest percentage is expressed to 5 decimal places.

Occurrences:

System	Message
PTCS	MT552 MT510 MT541

3.6. Accrued interest sign

PTCS does not apply any control on this optional field.

This field describes one of the following data:

- accrued interest percentage
- or
- accrued interest amount.

The accrued interest sign helps determine whether the accrued interest amount (or percentage) must be added to (+) or deducted from (-) the trade price when calculating the gross amount (see details of the corresponding data).

Range of values:

The possible values of this field are '+' and '-'.

Occurrences:

System	Message
PTCS	MT552 MT510 MT541

3.7. Allocation reference

PTCS does not apply any control on this optional field.

If the transaction notice follows:

- the sending of a "block execution notice" (Y)
- the receipt of the intermediary's detailed allocations

then this field indicates the allocation reference corresponding to the transaction notice.

Occurrences:

System	Message
PTCS	MT552 MT510 MT541

3.8. Amount

This field contains a figure that represents the content of an account, balance, or position.

In the settlement sub-system, amounts are unsigned whole numbers with no comma or decimal separator.

Range of values:

AMOUNT format

Occurrences:

System	Message
PTCS	MT552 MT553 MT510 MT541

3.9. Amount sign

This field describes the direction (debit or credit) of the payment amount which immediately follows the amount sign.

In MT553, the amount sign applies to the following amounts:

- currency 1 latest balance
- currency 2 latest balance
- currency 1 latest balance after movement following corporate actions
- currency 2 latest balance after movement following corporate actions
- currency 1 balance of trades aligned on the day
- currency 2 balance of trades aligned on the day
- currency 1 balance of trades aligned the next day after movement following corporate actions
- currency 2 balance of trades aligned the next day after movement following corporate actions
- currency 1 new balance
- currency 2 new balance.

In MT510, the amount sign is always positive, except if the gross sell amount is lower than the fees for one of the two currencies or for both currencies of the payment amount.

Range of values:

The possible values of this field are '+' and '-'.

Occurrences:

System	Message
PTCS	MT552 MT553 MT510 MT541

3.10. Application routing code

This field enables the participant to route, within its own applications, the messages received through a single logical address.

PTCS performs the validation of this field, that is part of the unique identifier of the sender/receiver.

The rule related to its correct valorisation will be provided by Euronext Securities back-office to the participant.

Occurrences:

System	Message
PTCS	MT552 MT553 MT584 MT595 MT502 MT503 MT510 MT541 MT551

3.11. Balance settlement date

This field corresponds to the last business day of the month.

Range of values:

DATE Format

Occurrences:

System	Message
PTCS	MT553

3.12. Block reference

PTCS does not apply any control on this optional field.

This field indicates the 'block execution' reference.

Occurrences:

System	Message
PTCS	MT552 MT510 MT541

3.13. Brokerage amount

PTCS does not apply any control on this optional field.

This field is the result of the brokerage calculation. It is zero if the trade does not have any brokerage.

Detail:

- Currency code
- Amount

Occurrences:

System	Message
PTCS	MT552 MT510 MT541

3.14. Brokerage rate

PTCS does not apply any control on this optional field.

This field indicates the basis rate used to calculate the brokerage amount. It is expressed to 3 decimal places.

It is part of the 'transaction notice' detailed fees (MT510).

Range of values:

AMOUNT format

Occurrences:

System	Message
PTCS	MT552 MT510 MT541

3.15. Credited participant code in currency 1

This field represents the cash credited participant in currency 1 during settlement.

Range of values:

PARTICIPANTS table (PTCS Referential)

Occurrences:

System	Message
PTCS	MT552 MT541

3.16. Credited participant code in currency 2

This field represents the cash credited participant in currency 2 during settlement.

Range of values:

PARTICIPANTS table (PTCS Referential)

Occurrences:

System	Message
PTCS	MT552 MT541

3.17. Debited participant code in currency 1

This field represents the cash debited participant in currency 1 during settlement.

Range of values:

PARTICIPANTS table (PTCS Referential)

Occurrences:

System	Message
PTCS	MT552 MT541

3.18. Debited participant code in currency 2

This field represents the cash debited participant in currency 2 during settlement.

Range of values:

PARTICIPANTS table (PTCS Referential)

Occurrences:

System	Message
PTCS	MT552 MT541

3.19. Client reference

PTCS does not apply any control on this optional field.

This field is the client account number in the Intermediary institution.

It is only used for direct orders.

In case of direct orders, this reference allows the Intermediary to identify the client for which it manages the order.

The client reference usually appears in the original order. However, this reference is not mandatory as the brokerage firm does not necessarily know it.

Occurrences:

System	Message
PTCS	MT552 MT510 MT541

3.20. Comments

PTCS does not apply any control on this optional field.

Optional field, filled in at parties' discretion.

Occurrences:

System	Message
PTCS	MT502 MT510

3.21. Comments field

PTCS does not apply any control on this optional field.

This is an optional field, filled out at the discretion of the participants.

It only appears in the messages sent by the systems if the participant filled it out the initial message.

Occurrences:

System	Message
PTCS	MT503 MT551

3.22. Commission amount

PTCS does not apply any control on this optional field.

This field represents the brokerage commission (remuneration paid to the brokerage firm for a service).

Detail:

- Currency code
- Amount

Occurrences:

System	Message
PTCS	MT552 MT510 MT541

3.23. Conditional delay maturity date

PTCS does not apply any control on this optional field.

This field contains the final maturity date of a transaction carried out on a conditional date.

In the particular case of an exercise or an assignment of a negotiable option on equities, it equals the option maturity date.

The conditional delay maturity date is mainly useful to the Intermediary for direct orders.

Range of values:

DATE Format

Occurrences:

System	Message
PTCS	MT552 MT510 MT541

3.24. Contested field number

PTCS does not apply any control on this optional field.

This field contains the number of the transaction notice zone with the contested information.

The contested field number allows for identification of the error mentioned by the Intermediary, and gives additional information related to the refusal reason code (see details of the corresponding data).

Indeed, certain refusal reasons can apply to different input fields. In this case, the contested field number is required to precisely describe the error.

Occurrences:

System	Message
PTCS	MT503 MT551

3.25. Counterparty participant code

This field contains the counterparty code of the recipient participant of an MT553.

It is filled with the following codes:

- for a liquidation account statement transmitted to the intermediary:
 - code of a Market Member admitted to the settlement sub-system, which can be:
 - the Market Member or intermediary of the Market Member (direct participant) that sent the transaction notices forming the liquidation account;
 - the Market Member's Authorised Agent (direct participant and not a trader) to which one or several Market Member(s) (indirect participant) has given a clearing proxy (these are at the origin of the transaction notices forming the liquidation account); or
 - the Market Member or intermediary of the Market Member (direct participant) clearing its own trades as well as those of the Market Member (indirect participant) that has given the intermediary a clearing proxy (the transaction notices forming the liquidation account are then jointly sent by the direct participant Market Member, and by each of the indirect participant Market Members).
- for a settlement account statement transmitted to a market member:
 - the intermediary code in the CSD of reference account under which the movements will be processed for its own trades, as well as for the indirect participants for whom it is a deputised participant.

Range of values:

PARTICIPANTS table (PTCS Referential)

Occurrences:

System	Message
PTCS	MT553

3.26. Credited security code

This field uniquely identifies the security to which the securities that are part of movements carried out between institutions is debited, and determines the resulting securities balances.

Range of values:

SECURITIES table (PTCS Referential)

Occurrences:

System	Message
PTCS	MT552 MT541

3.27. Currency 1 latest balance

PTCS does not manage currencies other than EUR.

This field contains the balance resulting from trade consolidation:

- aligned by D-1,
- carried out:
 - between the same two participants,
 - on the same security,
 - to be paid on the same sub-accounts, credit and debit account natures,
 - to be paid in the same currencies 1 and 2,
 - to be settled on the same date,
- adjusted by the application at the end of D-1 for market claims and transformations with D as the payment date.

This balance can be zero.

It is used in the settlement account statement where it allows the participant to identify its latest balance in currency 1.

Detail:

- Amount sign
- Currency code
- Amount

Occurrences:

System	Message
PTCS	MT553

3.28. Currency 1 latest balance after adjustment

PTCS does not manage currencies other than EUR.

This field contains the balance resulting from the latest currency 1 balance adjustment (see details of the corresponding data) by the application at the end of day D, of corporate actions with D+1 payment date.

This balance can be zero.

It is used in the liquidation account statement where it allows the participant to identify its latest balance in currency 1 following adjustment after-market claims and transformations.

Detail:

- Amount sign
- Currency code
- Amount

Occurrences:

System	Message
PTCS	MT553

3.29. Currency 1 new balance

PTCS does not manage currencies other than EUR.

This field contains the balance resulting from trade consolidation:

- aligned by D (date of constitution of the liquidation account statement);

- carried out:
 - between the same two participants
 - on the same security
 - to be paid on the same sub-accounts, credit and debit account natures
 - to be paid in the same currencies 1 and 2
 - to be settled on the same date;
- adjusted by the application at the end of day D for market claims and transformations with D+1 as the payment date.

New balance = latest balance after adjustment + day's trades balance after adjustment

This balance can be zero.

This field is used in the liquidation account statement where it allows the participant to identify its new balance in currency 1.

Detail:

- Amount sign
- Currency code
- Amount

Occurrences:

System	Message
PTCS	MT553

3.30. Currency 2 latest balance

PTCS does not manage currencies other than EUR.

Occurrences:

PTCS does not manage currencies other than EUR.

Occurrences:

System	Message
PTCS	MT553

3.33. Currency code

PTCS does not manage currencies other than EUR.

This field contains the currency code in which amounts are expressed.

The currency code, and its number of significant decimal places, are defined by ISO 4217 (the securities settlement sub-system uses only the alphabetic codes).

Range of values:

CURRENCIES table

Occurrences:

System	Message
PTCS	MT552 MT553 MT510 MT541

3.34. Day's aligned trades currency 1 balance

This field contains the balance resulting from trade consolidation:

- aligned on D (date of constitution of the liquidation account statement)
- carried out:
 - between the same two participants,
 - on the same security,
 - to be paid on the same sub-accounts and credit and debit account natures,

- to be paid in the same currencies 1 and 2,
- to be settled on the same date;
- not yet adjusted by the application at the end of day D for market claims and transformations with D+1 as payment date.

This balance can be zero.

This field is used in the liquidation account statement where it allows the participant to indicate its balance in currency 1 for the day's aligned trades.

Detail:

- Amount sign
- Currency code
- Amount

Occurrences:

System	Message
PTCS	MT553

3.35. Day's aligned trades currency 1 balance after adjustment

This field contains the balance resulting from the latest currency 1 balance adjustment (see details of the corresponding data) by the application at the end of day D, of corporate actions with D+1 payment date.

This balance can be zero.

Day's aligned trades currency 1 balance after adjustment is used in the liquidation account statement where it allows the participant to indicate its balance in currency 1 for the day's aligned trades, after adjustment by market claims and transformations.

Detail:

- Amount sign
- Currency code
- Amount

Occurrences:

System	Message
PTCS	MT553

3.36. Day's aligned trades currency 2 balance

This balance is the result of trade consolidation:

- aligned on D, (date of constitution of the liquidation account statement);
- carried out:
 - between the same two participants,
 - on the same security,
 - to be paid on the same sub-accounts and credit and debit account natures,
 - to be paid in the same currencies 1 and 2,
 - to be settled on the same date;
- not yet adjusted by the application at the end of day D for market claims and transformations with D+1 as the payment date.

This balance can be zero.

This field is used in the liquidation account statement where it allows the participant to indicate its balance in currency 2 of day's aligned trades.

Detail:

- Amount sign
- Currency code
- Amount

Occurrences:

System	Message
PTCS	MT553

3.37. Day's aligned trades currency 2 balance after adjustment

This field contains the balance resulting from the latest currency 2 balance adjustment from the day's trades (see details of the corresponding data) by the application at the end of day D for corporate actions with D+1 as the payment date.

This balance can be zero.

This field is used in the liquidation account statement where it allows the participant to indicate its balance in currency 2 of the day's aligned trades after adjustment by market claims and transformations.

Detail:

- Amount sign
- Currency code
- Amount

Occurrences:

System	Message
PTCS	MT553

3.38. Day's aligned trades securities balance

This field contains the balance resulting from trade consolidation:

- agreed on D (date of constitution of the liquidation account statement);
- carried out:
 - between the same two participants,
 - on the same security,
 - to be paid on the same sub-accounts and credit and debit account natures,
 - to be paid in the same currencies 1 and 2,
 - to be settled on the same date;
- not yet adjusted by the application at the end of day D for market claims and transformations with the payment date D+1.

This balance can be zero.

This field is used in the liquidation account statement where it allows the participant to indicate its securities balance of day's aligned trades.

Detail:

- Quantity sign
- Quantity unit
- Securities quantity

Occurrences:

System	Message
PTCS	MT553

3.39. Day's aligned trades securities balance after adjustment

This field contains the balance resulting from the securities balance adjustment of the day's trades (see details of the corresponding data) by the application at the end of day D for corporate actions with D+1 as the payment date.

This balance can be zero.

This field is used in the liquidation account statement where it allows the participant to indicate its securities balance of trades aligned on the day, after adjustment by market claims and transformations.

Detail:

- Quantity sign
- Quantity unit
- Securities quantity

Occurrences:

System	Message
PTCS	MT553

3.40. Day's date

This field contains the date concerned by the daily balance or the liquidation account statement.

This field is used in daily balances transmitted to PTCS sub-system participants as well as in the PTCS sub-system liquidation account statement, for information purposes.

Range of values:

DATE Format

Occurrences:

System	Message
PTCS	MT553 MT584

3.41. Debited security code

This field contains the debited security code which uniquely identifies the security to which the securities part of movements carried out between institutions is debited and determines the resulting securities balances.

Range of values:

SECURITIES table (PTCS Referential)

Occurrences:

System	Message
PTCS	MT552 MT541

3.42. Department code

PTCS does not apply any control on this optional field.

This field contains the code assigned to the order initiator. It is only used for direct orders.

For example, it can be a number assigned by the Intermediary to the portfolio manager(s) who usually receive(s) an answer to the direct orders at the Intermediary.

The portfolio manager must indicate the department code if the order is a direct order.

Foreign or institutional clients could be assigned a personal code and required to indicate it to the Market Member.

Occurrences:

System	Message
PTCS	MT552 MT510 MT541

3.43. Deferred payment commission amount

This field contains the result of the deferred payment commission calculation.

Detail:

- Currency code
- Amount

Occurrences:

System	Message
PTCS	MT552 MT510 MT541

3.44. Deferred payment commission rate

This field contains the rate applied to Immediate Settlement trades on deferred settlement service market securities. It is expressed in a fraction of three figures after the decimal.

In the case of a deferred settlement service transaction, the deferred payment commission corresponding to the extension order must be included in the transaction notice 'there' and not in the transaction notice 'here'.

This rate is part of the 'transaction notice' detailed fees (MT510).

Range of values:

AMOUNT format

Occurrences:

System	Message
PTCS	MT552 MT510 MT541

3.45. Direct principal client name

PTCS does not apply any control on this optional field.

This field specifies the direct principal client name.

It is only used for direct orders.

This data allows the Intermediary to unambiguously identify the principal client, whether or not the department code data has been input (see details of the corresponding data).

Occurrences:

System	Message
PTCS	MT552 MT510 MT541

3.46. Electronic invoice indicator

PTCS does not apply any control on this optional field.

Occurrences:

System	Message
PTCS	MT552 MT510 MT541

3.47. Electronic invoicing identifier code

PTCS does not apply any control on this optional field.

Occurrences:

System	Message
PTCS	MT552 MT510 MT541

3.48. Error code

In an error or rejection message, this field indicates the reason for the error or rejection.

Range of values:

Error codes (see chapter 4)

Occurrences:

System	Message
PTCS	MT595

3.49. Error description

This field contains the description of the error indicated by the error code.

Range of values:

Error codes (see chapter 4)

Occurrences:

System	Message
PTCS	MT595

3.50. Error issue date

This field indicates the date on which the error was sent.

Range of values:

DATE Format

Occurrences:

System	Message
PTCS	MT595

3.51. Exchange rate

PTCS does not apply any control on this optional field.

This field contains the exchange rate between the quotation currency and EUR.

It is expressed to 5 decimal places.

This rate allows the determination of the fee amount in EUR which corresponds to fees that are included in the payment amount calculation (see details of the corresponding data).

Range of values:

AMOUNT format

Occurrences:

System	Message
PTCS	MT552 MT510 MT541

3.52. Execution reference

PTCS does not apply any control on this optional field.

If the transaction notice follows a "single execution notice" (X), this field indicates this note's reference.

Occurrences:

System	Message
PTCS	MT552 MT510 MT541

3.53. Execution type

PTCS does not apply any control on this optional field.

This field identifies the type of the execution.

This indicator aims to facilitate the follow-up and the update of the intermediary's order book.

Note: When this field is not filled in, it means that the original order was executed completely or that the conditional order was completely unwound.

Occurrences:

System	Message
PTCS	MT552 MT510 MT541

3.54. Fee details

PTCS does not apply any control on this optional field.

This field is optional for the 'Transaction notice' (MT510) and is broken down into 6 sub-fields:

- Brokerage rate
- Deferred Payment Amount Commission rate
- Tax rate
- Brokerage amount
- Commission amount
- Deferred Payment Commission amount.

This field allows participants to add information in relation to the fee amount.

Detail:

- Brokerage rate
- Deferred payment commission rate
- VAT rate
- Brokerage amount
- Commission amount
- Deferred payment commission amount

Occurrences:

System	Message
PTCS	MT552 MT510 MT541

3.55. File reference

This 21-character field indicates the number of transactions in a file (batch of messages) transmitted to inform the recipient.

The field appears just after the network heading (in the 6th position). It consists of 4 sub-fields:

- 'Significant transactions' indicator: 1AN, which indicates whether the message was sent as part of a batch or in real time;
- 'Transaction file' reference - File reference during the day: 6N (hhmmss)
- Total number of transactions in file: 7N; and
- Sequential number of the transaction inside the file: 7N.

The file reference allows each recipient to identify a file received and to check that all transactions are contained in the same file. The transactions in the file are numbered sequentially for each routing code recipient.

Range of values:

'SIGNIFICANT TRANSACTIONS' INDICATOR: ASSOCIATED VALUE

0: Empty file

1: Message as part of a batch, the participant is a recipient of one or several significant messages

2: Message in real time

Occurrences:

System	Message
PTCS	MT552 MT553 MT541 MT551

3.56. Generated transaction reference

This field, in the movement reference, identifies a movement in a market system.

Occurrences:

System	Message
PTCS	MT552 MT541

3.57. Gross amount

This field indicates the trade amount value.

This amount can be zero.

When this field is used as a basis for fees the gross amount constitutes the payment amount (see details of the corresponding data).

Detail:

- Currency code
- Amount

Occurrences:

System	Message
PTCS	MT552 MT510 MT541

3.58. Participant account structure data 3 (free field)

PTCS does not apply any control on this optional field.

Occurrences:

System	Message
PTCS	MT552 MT553 MT502 MT510 MT541

3.59. Indexed price indicator

PTCS does not apply any control on this optional field.

This field indicates if the traded security price is indexed or not.

Occurrences:

System	Message
PTCS	MT552 MT510 MT541

3.60. Indexing rate

PTCS does not apply any control on this optional field.

The indexing rate is expressed to 7 decimal places.

Occurrences:

System	Message
PTCS	MT552 MT510 MT541

3.61. Indexing ratio

PTCS does not apply any control on this optional field.

Public index rate used for inflation adjustment purposes.

Detail:

- Indexing ratio sign
- Indexing rate

Occurrences:

System	Message
PTCS	MT552 MT510 MT541

3.62. Indexing ratio sign

PTCS does not apply any control on this optional field.

Occurrences:

System	Message
PTCS	MT552 MT510 MT541

3.63. Intended settlement date

This field contains the date agreed by the institutions for settlement of the movement.

Note that in the PTCS sub-system, it is formatted by the system as follows:

- the settlement date provided by the participants in the transaction notice (MT510);

- the trade date and the relevant liquidation date for DSS transactions.

Range of values:

DATE Format

Occurrences:

System	Message
PTCS	MT552 MT541

3.64. Intermediary account number

PTCS does not apply any control on this optional field.

This field contains the account number assigned by the Brokerage Firm to an Intermediary principal department.

This number is used for validation when there are several principal departments within an Intermediary leading it to request the opening of accounts per department and separate allocation according to the departments concerned.

Occurrences:

System	Message
PTCS	MT552 MT510 MT541

3.65. Intermediary authorised agent code

PTCS does not apply any control on this optional field.

Code of the direct party managing the cash and securities clearing for an indirect party intermediary.

Range of values:

Party table

Occurrences:

System	Message
PTCS	MT552 MT502

3.66. Intermediary beneficiary account

PTCS does not apply any control on this optional field.

Allows the indirect party's intermediary to specify the account to be credited/debited at its authorised agent.

It is provided to the authorised agent via the alignment notice message.

The trader cannot see it.

Detail:

- Trade beneficiary account codification type
- Trade beneficiary account

Occurrences:

System	Message
PTCS	MT552 MT502

3.67. Intermediary code

This field uniquely identifies any third-party participant (of the type intermediary, market member/intermediary or indirect participant) in the PTCS sub-system. The third-party participant must be authorised to use the PTCS sub-system.

Range of values:

Participant code in PTCS Referential

Occurrences:

System	Message
PTCS	MT552 MT502 MT503 MT510 MT541 MT551

3.68. Intermediary final beneficiary

PTCS does not apply any control on this optional field.

Account identification (intermediary's internal reference).

Detail:

- Trade beneficiary codification type
- Trade beneficiary

Occurrences:

System	Message
PTCS	MT552 MT510 MT541

3.69. Intermediary local authorised agent account

PTCS does not apply any control on this optional field.

For settlement outside T2S (transaction notice without settlement), this field allows the trader to inform its counterparty of the local authorised agent account number (previous field) on the PSET specified by the trader.

This field should only be filled if the local agent (previous field) has been identified with its BIC code.

Occurrences:

System	Message
PTCS	MT552 MT502 MT541

3.70. Intermediary local authorised agent identification

PTCS does not apply any control on this optional field.

For settlement outside T2S (transaction notice without settlement), this field allows the trader to inform its counterparty of the authorised agent managing the settlement on the local market.

This agent may act directly on behalf of the intermediary or indirectly on behalf of its authorised agent (input in field 11 of the notice).

Detail:

- Local authorised agent codification type
- Local authorised agent

Occurrences:

System	Message
PTCS	MT552 MT502 MT541

3.71. Intermediary place of settlement

PTCS does not apply any control on this optional field.

Place of settlement (PSET) identification for the intermediary. Identifies a central depository or a country, if physical securities are concerned.

Detail:

- Type of place of settlement
- Place of settlement identification

Occurrences:

System	Message
PTCS	MT552 MT502 MT541

3.72. Intermediary sub-agent identification

PTCS does not apply any control on this optional field.

This field identifies the intermediary's final settlement organisation (sub-agent) BIC code, notably within a cross-border delivery.

Occurrences:

System	Message
PTCS	MT552 MT502 MT541

3.73. Internal reference

This field allows the trader to optionally allocate an internal reference to the invoice.

3.80. Last balance date

This field contains the date of the latest daily report or the latest liquidation account statement sent by the PTCS sub-system relative to the participant.

If the last balance date is zero, it is the first daily report or the first liquidation account statement relative to this participant.

Range of values:

DATE Format

Occurrences:

System	Message
PTCS	MT553 MT584

3.81. Latest securities balance

This field contains the balance resulting from trade consolidation:

- aligned by D-1;
- carried out:
 - between the same two participants,
 - on the same security,
 - to be paid in the same currencies 1 and 2,
 - to be settled on the same date; and
- adjusted by the application at the end of D-1 for market claims and transformations with D as the payment date.

This balance can be zero.

This field is used in the liquidation account statement where it allows the participant to identify its latest securities balance.

The default value is zero.

Occurrences:

System	Message
PTCS	MT584

3.103. Number of transaction notices kept without answer

This field indicates the number of 'Transaction notice' type transactions in valid status that were received by the PTCS sub-system and which have not received any answers or reached the agreement deadline.

The default value is zero.

Occurrences:

System	Message
PTCS	MT584

3.104. Number of transaction notices held without answer from the previous day

This field indicates the number of 'Transaction notice' type transactions in valid status, that have neither received any answers nor reached the agreement deadline for the previous day.

The default value is zero.

Occurrences:

System	Message
PTCS	MT584

3.105. Number of transactions not sent to Settlement

This field indicates the number of transactions aligned by the PTCS sub-system and does not give rise to movements to settle (straddle buy/sell).

In the case of a daily report transmitted to a deputised member, this field does not include the transactions aligned by its deputising members (such transactions appear in the deputising member's daily report).

The default value is zero.

Occurrences:

System	Message
PTCS	MT584

3.106. Order date

This field contains the date of order entry in the market member's order book. It helps the Intermediary to identify the order concerned by the transaction notice.

It is mainly useful to the Intermediary for direct orders. The transaction notice was not referenced in the Intermediary's order book, hence the Intermediary does not know the transaction notice reference assigned by the Market Member.

Range of values:

DATE Format

3.130. Refusal reason code

This field informs the market member of the reason why the transaction notice was refused. It allows the market member to facilitate the necessary modifications (obviously, if the Intermediary contests it and this is justified and accepted as such by the Market Member).

The refusal reason code will give the following reasons for refusing a transaction notice:

- Reasons linked to the transaction notice characteristics:
 - Mandatory data not provided: the field corresponding to a mandatory item for the system was not filled in. This code is justified only when the network does not ensure existence controls;
 - Invalid format: the data is not formatted as required (for example, alphabetical characters appear in a numerical field). This code is justified only when the network does not ensure format controls;

- Incorrect reference: the data no longer corresponds to the current state of reference table database (for example, change of security code) or the applicable tariff. This code is justified only when the reference table database is managed by the participants (not by the market system);
- Inconsistency with original order: the data is not compatible with the data initially transmitted in the order (transaction side, change of order from deferred settlement service to cash immediate settlement or order limits, for example). The Intermediary can no longer designate the 'Traded quantity' as a contested field, or will receive an error message (code 611);
- Incorrect data: the data (not contained in the original order, like the trade price or time) is contested by the Intermediary; or
- Incorrect amount: the calculated amount is contested (for example, incorrect fees).
- Reasons linked to order execution:
 - Execution date invalid: the initial order indicated a deadline after which the order could not be executed. Even though the deadline was passed, a transaction notice was generated for an order known as 'fallen'. This notice should therefore be refused;
 - Cancelled order: a transaction notice was generated on a cancelled order. This transaction notice should therefore be refused;
 - Double execution: the order was executed twice. One of the transaction notices generated should therefore be refused;
 - Traded quantity higher than initial order quantity: the Market Member executed the order exceeding the requested quantity. The transaction notice should therefore be refused;
 - Traded quantity lower than the initial order quantity and price not reached: the initial order indicated a limit price. The Market Member partially executed the order, without reaching the limit price. The transaction should therefore be refused;
 - Incorrect recipient: the Market Member did not transmit the transaction notice to the institution in charge of the alignment;
 - At the Market Members's request: the Market Member requested the transaction notice refusal;
 - Fragment orders: the bank passed a grouped order. It agrees with the received transaction notice, but wishes to obtain a fragmentation of its grouped transaction notice and requests the generation of fragment transaction notices whose total quantities will equal the initial transaction notice. This code is justified only when applicable regulations would not be modified in order to cancel the fragmentation of global orders of the Market Member.
- Reasons linked to the lack of answers to transaction notices (these refusal reasons are automatically generated by the system):

- Specific forced refusal: the transaction notice related to a deferred settlement service trade with settlement date > S+4 is not responded to on the evening of S+3: it is thus refused by forced automatic processing; or
- Forced refusal: the transaction notice relative to a trade with an atypical settlement time period is not responded to on the day preceding the theoretical settlement date: it is thus refused by the forced automatic processing.

Range of values:

CODE: ASSOCIATED VALUE

Errors in the transaction notice characteristics:

- 10: Mandatory data not provided
- 11: Invalid format
- 12: Incorrect reference
- 13: Incompatibility with original order
- 14: Incorrect data
- 15: Incorrect amount

Errors in the order execution:

- 20: Execution date invalid
- 21: Order cancelled
- 22: Double execution
- 23: Traded quantity higher than original order quantity
- 24: Traded quantity lower than original order quantity and hit price not reached
- 30: Receiver incorrect
- 50: Fragment orders
- 60: Electronic invoicing error

Refusals by the system of unanswered transaction notices:

- 98: Particular forced refusal
- 99: Forced refusal

3.139. Securities new balance

This field contains the balance resulting from trade consolidation:

- agreed by D (date of constitution of the liquidation account statement);
- carried out:
 - between the same two participants,
 - on the same security,
 - to be paid on the same sub-accounts, credit and debit account natures,
 - to be paid in the same currencies 1 and 2,
 - to be settled on the same date;
- adjusted by the application at the end of day D for market claims and transformations with D+1 as the payment date.

New balance = latest balance after adjustment + day's trades balance after adjustment.

This balance can be zero.

It is used in the liquidation account statement and informs the participant of its new securities balance.

3.158. Trade date

This field indicates the date on which the contract was agreed upon by the institutions.

In PTCS, this date, linked to the transaction notice issue date, is used for calculating the agreement delay. The agreement delay is the time period given to the intermediary to respond to the transaction notice, after which the transaction notice will be accepted or refused by the forced automatic processing if the intermediary does not answer.

The trade date is a matching criterion.

Range of values:

3.160. Trade price

This field indicates the price at which a transaction on a listed security was carried out.

For debt securities, the trade price corresponds with the price 'net of accrued interest'.

When the original transaction is an exercise or an assignment of a negotiable option on equities, the indicated price is the option exercise price.

The trade price can be zero.

This price allows participants to value the trade gross amount (see details of the corresponding data).

Note: the trade price is expressed to seven decimal places, whatever the currency or type of listing.

3.165. Traded securities quantity

This field contains the quantity of securities traded by the participants or the securities balance to which the movement pertains.

The quantity of the securities, together with a 'quantity unit', represents the quantity of securities to which the movement pertains.

- When the quantity unit is input as 'FMT', the quantity of traded securities represents a nominal amount that is the product of:
(Quantity) x (nominal amount, expressed in the nominal currency).
- When the quantity unit is input as anything other than 'FMT', the quantity of traded securities represents a quantity of securities.

Range of values:

QUANTITY format

Occurrences:

3.176. Trading capacity indicator

PTCS does not apply any control on this optional field.

Indicates whether the company has executed the trade:

- on its own behalf (in its own name or in the name of a client)
- on behalf of and in the name of a client.

Occurrences:

System	Message
PTCS	MT552 MT510 MT541

3.177. Transaction family number

PTCS does not apply any control on this optional field.

This field contains the common reference for transactions from the same family (multi-securities instructions and linked transactions).

This reference is completed in linked transactions that form a transaction family.

This field is never completed in PTCS messages (it appears simply for the sake of compatibility with the format of the movement to be settled).

Occurrences:

System	Message
PTCS	MT552 MT541

3.178. Transaction nature

Transaction nature identification.

Range of values:

C: Ordinary transaction notice:

Confirms, in a detailed and final manner, a trade's execution mode. It automatically triggers settlement, and, if sent or received by an indirect party, the authorised agent information.

D: Transaction Free of Payment:

Since the currency is not accepted in T2S (as non EUR), settlement instructions include only securities and no cash information (only for cash orders);

S: Transaction notice without settlement:

Confirms, in a detailed and final manner, a trade's execution mode. Does not trigger settlement, either because the security is not eligible for settlement, or because the counterparties chose so. If sent or received by an indirect party, and if the latter specified an authorised agent in its message ('S' transaction notice or agreement with an 'S' transaction notice), triggers the sending of the instruction to the authorised agent, so the latter can prepare settlement.

Default value: C

Occurrences:

System	Message
PTCS	MT552 MT510 MT541

3.179. Transaction notice reference

This field contains the reference assigned to the transaction notice by participants.

The transaction notice reference contains three sub-fields:

1. for routed orders:

- a) the order banking reference (see NIOBE standard: B2 if the order is routed by the SIT/Stock network) (13AN),
- b) the transaction notice number (2AN) can be zero,
- c) the indicator showing the reference initiator (B = Bank) (1AN); and

2. for non-routed orders (e.g. direct orders, exercises/assignments of negotiable options):

- a) the reference generated by the Market Member (e.g. trade reference) (13 AN),
- b) the transaction notice number (2AN) can be zero,
- c) the indicator showing the order direct character (D = Direct) (1AN). The Market Member must input 'D' when the order was received by means other than the normal routing which exists between the Intermediary and itself.

The transaction notice number must allow to distinguish, for the same order reference:

- multiple order executions, the 'here' and 'there' transaction notices in the case of a postponement or use of funds or securities;
- the transaction notice replacing the initial transaction notice; and
- the transaction notice which may follow a transaction notice rejected due to error.

Note: Since the integration of deferred settlement service securities in the settlement sub-system, this field is no longer numerical. It is now possible to alphanumerically arrange corresponding transaction notices with the same order reference. This alphanumerical item is assigned by the market member, sequentially or not, with no necessary relation between the above-mentioned numbering ranges and characteristics.

Occurrences:

System	Message
PTCS	MT552 MT502 MT503 MT510 MT541 MT551

3.180. Transaction notice type

This field identifies the following transaction notice types:

- initial: the transaction notice is the first transaction notice sent for the transaction and it does not follow a claim.

This code informs the counterparty of the type of agreement or the incidents that affected the agreement.

Range of values:

I: Initial

Occurrences:

System	Message
PTCS	MT552 MT510 MT541

3.181. Transaction reference (institution's internal)

This field contains the internal reference allocated to the transaction by the institution sending the message.

By using the institution's transaction references, the market systems enable the institutions to link the information they receive with their transactions.

In the PTCS sub-system, this reference corresponds to the trade reference and transaction notice reference.

Occurrences:

System	Message
PTCS	MT552 MT541

3.182. Transaction sequence number

PTCS does not apply any control on this optional field.

This field indicates the transaction's sequence within a given family (multi-securities instructions and linked transactions).

This field appears in one of the PTCS sub-system messages for compatibility with other systems, but is never filled in.

Occurrences:

System	Message
PTCS	MT552 MT541

3.183. Transaction type

This field identifies, by means of an abbreviation:

- the order type (buy, sell, postponement); and

- the market on which the transaction was made.

This code determines the transaction directions and their settlement modes.

Range of values:

CODE: ASSOCIATED VALUE

A C: Security buy to be settled at Trade Date + 2

A R M: Security buy to be settled at month end (DSS)

A R P: Opening of new buy position on the next month following the rollover of a position (DSS)

R P A: Closure of previous buy position before the rollover of a position (DSS)

R P V: Closure of previous sell position before the rollover of a position (DSS)

V C: Security sell to be settled at Trade Date + 2

V R M: Security sell to be settled at month end (DSS)

V R P: Opening of new sell position on the next month following the rollover of a position (DSS)

Occurrences:

System	Message
PTCS	MT552 MT510 MT541

3.184. Type of place of settlement

PTCS does not apply any control on this optional field.

Range of values:

BIC (BIC code): for the CSD (Central Securities Depository) exact identification number

ISO (country code): for the delivery of physical securities: corresponds to the country of delivery or withdrawal of physical securities or if BIC code does not exist

Occurrences:

System	Message
PTCS	MT552 MT502 MT510 MT541

3.186. User references

This field identifies a movement in relation to an institution's own system for referencing transactions rather than the reference given by the settlement subsystem.

These references, filled in by the institutions or by the preparation systems, are included in the messages sent by the settlement sub-system.

Detail:

- Deliverer institution reference
- Deliveror institution reference

Occurrences:

System	Message
PTCS	MT552 MT541

3.187. VAT rate

PTCS does not apply any control on this optional field.

If the transaction notice serves as an invoice for a service taxed with VAT, and if VAT amount (field 49) is not nil, this rate must be input (PTCS performs a presence check).

The VAT rate is expressed to 3 decimal places.

Range of values:

AMOUNT format

Occurrences:

System	Message
PTCS	MT552 MT510 MT541

3.188. Yield rate

PTCS does not apply any control on this optional field.

Traded security price expressed as yield.

The Yield rate is expressed to 7 decimal places.

Occurrences:

System	Message
PTCS	MT552 MT510 MT541

4. Error Codes

4.1. 101 – “Rejected due to default”

For both cash and DSS transaction notices, when a participant (Broker, Custodian, or Settlement Agent) is declared in default, PTCS rejects both:

- New transaction notices.
- Existing transaction notices already present in the system.

Data / Messages referring to this rule of management:

N°	Data	Message
1	Participant code	MT510
3	Participant code	MT510

4.2. 176 – “Transaction notices without settlement are not authorised for DSS”

For transaction notices without settlement (transaction nature = “S”), only cash payment type notices are authorised. These are not transmitted to the settlement system.

Data / Messages referring to this rule of management:

N°	Data	Message
18	Transaction type	MT510
70	Transaction nature	MT510

4.3. 190 – “Invalid trading capacity indicator”

If the “trading capacity indicator” is filled in the value must be:

- AGEN – on behalf of third parties (agent); or
- PRIN – on its own behalf (principal).

Data / Messages referring to this rule of management:

N°	Data	Message
563	Trading capacity indicator	MT510

4.4. 191 – “Invalid order type”

If the “order type” is filled in the value must be:

- MAKT - at market order

Data / Messages referring to this rule of management:

N°	Data	Message
564	Order type	MT510

4.5. 194 – “Invalid time difference sign”

If the time difference is filled in, the sign must be:

- "+" if the local time is ahead of UTC (time zones east of Greenwich meridian) or
- "-" if the local time is behind UTC (time zones east of Greenwich meridian).

Data / Messages referring to this rule of management:

N°	Data	Message
----	------	---------

568	Time difference	MT510
567	Time difference sign	MT510

4.6. 459 – “Invalid transaction nature”

If the transaction is filled in, it must have an authorised value.

Data / Messages referring to this rule of management:

N°	Data	Message
70	Transaction nature	MT510

4.7. 500 – “Account nature and security holding do not match”

The issue date must be numerical.

Data / Messages referring to this rule of management:

N°	Data	Message
10	Issue date	MT510

4.8. 502 – “Incorrect issue date”

The transaction notice issue date must be later than or the same as the trade date.

For ordinary transaction notices (transaction nature = 'C'), the issue date must be the same as the system date (day's date) or the day before. Therefore, if the issue date on the transaction notice is D, the message can reach the PTCS system either on D, or on D+1 before 00:00 CET/CEST.

For transaction notices without settlement (transaction nature = 'S'), the issue date must be the same as the system date (day's date).

Data / Messages referring to this rule of management:

N°	Data	Message
10	Issue date	MT510
24	Trade date	MT510
70	Transaction nature	MT510

4.9. 505 – “Non-trading day trade date”

The trade date must be a business day (in line with the PTCS business days calendar).
This Error code is not applicable to DSS transactions.

Data / Messages referring to this rule of management:

N°	Data	Message
24	Trade date	MT510

4.10. 506 – “The delay between the trade date and the issue date exceeds the authorised delay”

The issue date must not be later than trade date + 30 trading days.

Data / Messages referring to this rule of management:

N°	Data	Message
10	Issue date	MT510
24	Trade date	MT510

4.11. 507 – “Settlement date not numerical”

The settlement date must be numerical.

Data / Messages referring to this rule of management:

N°	Data	Message
22	Settlement date	MT510

4.12. 508 – “Settlement date missing or a non-trading day or exceeding the maximum time limit”

For ordinary transaction notices (transaction nature = "C"), dates must comply with the rules below:

- if the issue date = trade date or trade date + 1, then the settlement date = trade date + 2 days;
- if the issue date > trade date + 1, then the settlement date = issue date + 1 days.

For transaction notices without settlement (transaction nature = "S"), the issue date must be prior to or same as the trade date + 35 days.

The issue date must be < or = to the trade date + 30.

The settlement date must be a business day.

The deadlines are expressed in business days.

Data / Messages referring to this rule of management:

N°	Data	Message
22	Settlement date	MT510
10	Issue date	MT510
24	Trade date	MT510
70	Transaction nature	MT510

4.13. 510 – “Settlement date not applicable, late issue”

For ordinary transaction notices (transaction nature = 'C'), the settlement date must be later than the date the transaction notice is processed.

For transaction notices without settlement (transaction nature = 'X', 'Y' or 'S'), the settlement date must be later than or the same as the date the transaction notice is processed.

For transaction notices exclusively serving as an invoice (transaction nature = 'F'), the settlement date may be later than, prior to or the same as the date the transaction notice is processed.

Data / Messages referring to this rule of management:

N°	Data	Message
22	Settlement date	MT510
70	Transaction nature	MT510

4.14. 511- “Order date not numerical”

The order date must be numerical.

Data / Messages referring to this rule of management:

N°	Data	Message
12	Order date	MT510

4.15. 512 – “Order date invalid or missing”

The order date must be filled in.

Data / Messages referring to this rule of management:

N°	Data	Message
12	Order date	MT510

4.16. 513 – “Conditional delay maturity date not numerical”

The conditional maturity date, if filled in, must be numerical.

Data / Messages referring to this rule of management:

N°	Data	Message
21	Conditional delay maturity date	MT510

4.17. 514 – “Conditional delay maturity date invalid or missing”

The ‘Conditional maturity date’ must be filled in only if the ‘Original transaction’ indicator is filled in.

Data / Messages referring to this rule of management:

N°	Data	Message
21	Conditional delay maturity date	MT510
19	Original transaction	MT510

4.18. 520 – “Order quantity not numerical”

The order quantity must be numerical.

Data / Messages referring to this rule of management:

N°	Data	Message
13	Order quantity	MT510

4.19. 521 – “Department code not numerical”

The department code, if filled in, must be numerical.

Data / Messages referring to this rule of management:

N°	Data	Message
15	Department code	MT510

4.20. 522 – “Trade time not numerical”

The trade time, if filled in, must be numerical.

Data / Messages referring to this rule of management:

N°	Data	Message
25	Trade time	MT510
62	Trade time	MT541
62	Trade time	MT552

4.21. 524 – “Trade price not numerical”

The trade price amount must be numerical.

Data / Messages referring to this rule of management:

N°	Data	Message
30	Amount	MT510

4.22. 528 – “Accrued interest percentage not numerical”

The accrued interest percentage must be numerical.

Data / Messages referring to this rule of management:

N°	Data	Message
37	Accrued interest percentage	MT510

4.23. 529 – “Accrued interest amount not numerical”

The accrued interest amount must be numerical.

Data / Messages referring to this rule of management:

N°	Data	Message
39	Amount	MT510

4.24. 530 – “Gross amount not numerical”

The gross amount must be numerical.

Data / Messages referring to this rule of management:

N°	Data	Message
41	Amount	MT510

4.25. 531 – “Trade rate not numerical”

The trade rate must be numerical.

Data / Messages referring to this rule of management:

N°	Data	Message
42	Trade rate	MT510

4.26. 532 – “Exchange rate not numerical”

The exchange rate must be numerical.

Data / Messages referring to this rule of management:

N°	Data	Message
45	Exchange rate	MT510

4.27. 533 – “Tax amount not numerical”

The tax amount must be numerical.

Data / Messages referring to this rule of management:

N°	Data	Message
44	Amount	MT510

4.28. 534 – “Broker firm fee amount (tax not incl.) not numerical”

The fee amount (tax not incl.) must be numerical.

Data / Messages referring to this rule of management:

N°	Data	Message
47	Amount	MT510

4.29. 535 – “Total VAT amount not numerical

The total VAT amount must be numerical.

Data / Messages referring to this rule of management:

N°	Data	Message
49	Amount	MT510

4.30. 536 – “Settlement amount in currency 1 not numerical”

The currency 1 payment amount must be numerical. The only authorised currency for PTCS is EUR, so any other currency will be rejected by PTCS.

Data / Messages referring to this rule of management:

N°	Data	Message
52	Amount	MT510

4.31. 539 – “Sender participant code different from market member code”

The participant code in the 'B1: sender ID' field must be the same as the: - 'Market Member Code' for a standard or transaction notice sent by the market member.

Data / Messages referring to this rule of management:

N°	Data	Message
	Participant code	MT510
6	Market member code	MT510
9	Transaction notice type	MT510

4.32. 540 – “Receiver participant code different from intermediary code”

The participant code in the 'B3: Receiver ID' field must be identical to the: - 'intermediary code' for a standard transaction notice sent by a market member.

Data / Messages referring to this rule of management:

N°	Data	Message
7	Intermediary code	MT510
	Participant code	MT510
6	Market member code	MT510
9	Transaction notice type	MT510

4.33. 542 – “Accrued interest sign invalid or missing”

This sign must be filled in with one of the following values:

- '+'; or
- '-': if the date of bond placement on the secondary market is earlier than the start of the interest period.

Data / Messages referring to this rule of management:

N°	Data	Message
36	Accrued interest sign	MT510

4.34. 544 – “Security not eligible in PTCS”

For ordinary transaction notices (transaction nature = "C"), the security code must be accepted in the PTCS system.

Data / Messages referring to this rule of management:

N°	Data	Message
17	Security code	MT510
70	Transaction nature	MT510

4.35. 545 – “Market member code member type not authorised”

The market member must exist as a market member in the PTCS reference table database on the trade date.

Data / Messages referring to this rule of management:

N°	Data	Message
6	Market member code	MT510

4.36. 547 – “Intermediary member type not authorised”

The intermediary must exist as an intermediary in the PTCS reference table database on the trade date.

Data / Messages referring to this rule of management:

N°	Data	Message
7	Intermediary code	MT510

4.37. 555 – “Network transaction code invalid or missing”

The transaction code must be:

- BBAO for a transaction notice
- BBACC for an agreement
- BBREF for a refusal

Data / Messages referring to this rule of management:

N°	Data	Message
5	B5: Transaction code	MT502
5	B5: Transaction code	MT503
5	B5: Transaction code	MT510

4.38. 556 – “Trade reference invalid or missing”

The trade reference must be filled in.

Data / Messages referring to this rule of management:

N°	Data	Message
9	Trade reference	MT502
9	Trade reference	MT503
11	Trade reference	MT510

4.39. 557 – “Transaction notice reference missing”

The transaction notice reference must be filled in.

Data / Messages referring to this rule of management:

N°	Data	Message
8	Transaction notice reference	MT502
8	Transaction notice reference	MT503
8	Transaction notice reference	MT510

4.40. 559 – “Settlement amount 1 currency code invalid or missing”

The only authorised currency for this production scope is EUR. Any other currency will be rejected.

For ordinary transaction notices (transaction nature = "C"), the currency code of the currency 1 payment amount must be input in EUR.

For transaction notices without settlement (transaction nature = "S"), the currency code of the currency 1 payment amount must be input but can be in any currency.

Data / Messages referring to this rule of management:

N°	Data	Message
51	Currency code	MT510
70	Transaction nature	MT510

4.41. 562 – “Trade date currency code invalid or missing”

The only authorised currency for this production scope is EUR. Any other currency will be rejected.

For transaction notices without settlement (transaction nature = "S"), the currency code of the trade price must be input but can be in any currency.

Data / Messages referring to this rule of management:

N°	Data	Message
29	Currency code	MT510
70	Transaction nature	MT510

4.42. 564 – “Trade time invalid”

The trade time, if filled in, must be valid.

Data / Messages referring to this rule of management:

N°	Data	Message
25	Trade time	MT510
62	Trade time	MT541

62

Trade time

MT552

4.43. 565 – “Transaction notice type invalid or missing”

The transaction notice type must be filled in and must be valid.

Data / Messages referring to this rule of management:

N°	Data	Message
9	Transaction notice type	MT510

4.44. 566 – “Original transaction type invalid or missing”

When the "original transaction" indicator is filled in, it must be 'A' (assignment of negotiable option) or 'E' (exercise of negotiable option) values.

The 'Original transaction' indicator must be filled in only if the transaction type corresponds with an assignment or an exercise of an option:

- indicator is 'E' for exercise of a negotiable option
- indicator is 'A' for assignment of a negotiable option.

Data / Messages referring to this rule of management:

N°	Data	Message
18	Transaction type	MT510
19	Original transaction	MT510

4.45. 567 – “Execution type invalid”

The 'Execution type' must be filled in with the following values:

- 'PS', signifying 'for the balance', for a previously partially executed order;
- 'AV', signifying 'on the account of', for a partial execution;

- 'SE', signifying 'only', for a partial execution on the last day of the trading month for cash transactions, or on the liquidation day for deferred settlement service transactions;
- 'MU', signifying "multiple execution" (executed at several times);
- 'MS', signifying "multiple execution for balance" (balance of an order previously partially executed, if executed at several times);
- 'MA', signifying "multiple execution to be valued" (if partial execution at several times)
- 'ME', signifying "multiple execution only" (if partial execution at several times on the last day of the trading month for cash transactions, or on the liquidation day for deferred settlement service transactions).

An execution type that is not filled in means that the original order was completely executed or that the conditional was completely unwound.

Data / Messages referring to this rule of management:

N°	Data	Message
20	Execution type	MT510

4.46. 568 – "Quotation price expression type invalid or missing"

The 'Trade price expression type' must be filled in as follows:

- 'PIE', signifying unit, if the security is listed by unit; and
- 'PCT', signifying percentage, if the security is listed by percentage.

Data / Messages referring to this rule of management:

N°	Data	Message
28	Trade price expression type	MT510

4.47. 569 – "Order origin code invalid or missing"

The order origin indicator (last field of the transaction notice reference) must be filled in and valid.

B = bank

D = direct order.

Data / Messages referring to this rule of management:

N°	Data	Message
8	Transaction notice reference	MT510

4.48. 570 – “Order quantity = 0”

The ‘order quantity’ must equal zero.

Data / Messages referring to this rule of management:

N°	Data	Message
13	Order quantity	MT510

4.49. 571 – “Accrued interest amount and rate nil and negative coupon”

If the accrued interest amount and percentage equal zero, the sign must be positive.

Data / Messages referring to this rule of management:

N°	Data	Message
39	Amount	MT510
36	Accrued interest sign	MT510
37	Accrued interest percentage	MT510

4.50. 572 – “Currency 1 settlement amount sign invalid or missing”

The only authorised currency for this production scope is EUR. Any other currency will be rejected.

The currency 1 payment amount sign must be filled in and must be valid.

This Error code is not applicable to buy transactions.

Data / Messages referring to this rule of management:

N°	Data	Message
50	Amount sign	MT510

4.51. 580 – “Direct order sender missing”

If the two following conditions are respected:

- the original transaction is neither an assignment of a negotiable option nor an exercise of a negotiable option (then the 'original transaction' indicator has neither value 'A' nor value 'E'); and
- the order is direct (the 'transaction notice reference' has 'D' as the last character);

then at least one of the fields 'Client reference', 'Department code' or 'Direct principal trader client name' must be filled in.

Data / Messages referring to this rule of management:

N°	Data	Message
15	Department code	MT510
14	Client reference	MT510
16	Direct principal client name	MT510
8	Transaction notice reference	MT510

19

Original transaction

MT510

4.52. 581 – “Order origin and original transaction do not match”

If the 'Original transaction' indicator shows that the original transaction is an exercise or an assignment of a negotiable option on equities, the last character of the transaction notice reference must be 'D'.

Orders relative to exercise and assignment of negotiable options on equities follow a separate route and are not part of the order book of the intermediary. They are thus considered as direct.

Data / Messages referring to this rule of management:

N°	Data	Message
8	Transaction notice reference	MT510
19	Original transaction	MT510

4.53. 582 – “Transaction notice already used”

For an entered 'Market member code' and 'Intermediary Code', the 'Transaction notice reference' entry must be unique.

Data / Messages referring to this rule of management:

N°	Data	Message
7	Intermediary code	MT510
6	Market member code	MT510
8	Transaction notice reference	MT510

4.54. 583 – “Trade mode code invalid”

The trade mode code, if filled in, must be valid.

Data / Messages referring to this rule of management:

N°	Data	Message
23	Trade mode code	MT510

4.55. 586 – “Accrued interest currency code invalid or missing”

The only authorised currency for this production scope is EUR. Any other currency will be rejected.

For ordinary transaction notices (transaction nature = "C"), if the currency code of the accrued interest is input, it must be in EUR.

For transaction notices without settlement (transaction nature = "S" or "F"), if the currency code of the accrued interest is input, it can be in any currency.

Data / Messages referring to this rule of management:

N°	Data	Message
38	Currency code	MT510
70	Transaction nature	MT510

4.56. 587 – “Transaction reference missing”

The transaction reference (B2) must be filled in.

Data / Messages referring to this rule of management:

N°	Data	Message
2	B2: Transaction reference	MT502
2	B2: Transaction reference	MT503

2

B2: Transaction reference

MT510

4.57. 588 – “Gross amount currency code invalid or missing”

The only authorised currency for this production scope is EUR. Any other currency will be rejected.

For ordinary transaction notices (transaction nature = "C"), the currency code of the gross amount must be input in EUR.

For transaction notices without settlement (transaction nature = "S"), the currency code of the gross amount must be input but can be in any currency.

Data / Messages referring to this rule of management:

N°	Data	Message
40	Currency code	MT510
70	Transaction nature	MT510

4.58. 589 – “Tax amount currency code invalid or missing”

The only authorised currency for this production scope is EUR. Any other currency will be rejected.

For ordinary transaction notices (transaction nature = "C"), the currency code of the tax amount must be input in EUR.

For transaction notices without settlement (transaction nature = "S" or "F"), the currency code of the tax amount must be input but can be in any currency.

Data / Messages referring to this rule of management:

N°	Data	Message
43	Currency code	MT510
70	Transaction nature	MT510

4.59. 590 – “Broker firm fee amount (tax not incl.) currency code invalid or missing”

The only authorised currency for this production scope is EUR. Any other currency will be rejected.

For ordinary transaction notices (transaction nature = "C"), the currency code of the fee amount, VAT not included, must be input in EUR.

For transaction notices without settlement (transaction nature = "X", "Y", "S"), the currency code of the fee amount, VAT not included, must be input but can be in any currency.

Data / Messages referring to this rule of management:

N°	Data	Message
46	Currency code	MT510
70	Transaction nature	MT510

4.60. 591 – “Total VAT amount currency code invalid or missing”

The only authorised currency for this production scope is EUR. Any other currency will be rejected.

For ordinary transaction notices (transaction nature = "C"), the currency code of the fee amount, VAT included, must be input in EUR.

For transaction notices without settlement (transaction nature = "S"), the currency code of the fee amount, VAT not included, must be input but can be in any currency.

Data / Messages referring to this rule of management:

N°	Data	Message
48	Currency code	MT510
70	Transaction nature	MT510

4.61. 592 – “Currency 1 settlement amount sign negative and buy order”

The currency 1 payment amount sign must be + if a buy order.

Data / Messages referring to this rule of management:

N°	Data	Message
50	Amount sign	MT510
18	Transaction type	MT510

4.62. 600 – “Receiver participant code different from market member code”

The participant code in the 'B3: receiver ID' field must be identical to the 'Market Member code' for an agreement or a refusal or for a pre-accepted transaction notice sent by the intermediary.

Data / Messages referring to this rule of management:

N°	Data	Message
	Participant code	MT502
6	Market member code	MT502
	Participant code	MT503
6	Market member code	MT503
	Participant code	MT510
6	Market member code	MT510
9	Transaction notice type	MT510

4.63. 601 – “Sender participant code different from intermediary code”

The participant code in the 'B1: sender ID' field must be identical to the 'Intermediary Code' for an agreement or a refusal or for a pre-accepted transaction notice sent by the intermediary.

Data / Messages referring to this rule of management:

N°	Data	Message
	Participant code	MT502
7	Intermediary code	MT502
	Participant code	MT503
7	Intermediary code	MT503
	Participant code	MT510
7	Intermediary code	MT510
9	Transaction notice type	MT510

4.64. 603 – “Refusal reason code not numerical”

The 'refusal reason code' must be numerical.

Data / Messages referring to this rule of management:

N°	Data	Message
10	Refusal reason code	MT503

4.65. 604 – “Refusal reason code invalid or missing”

The 'refusal reason code' must be filled in and must be valid.

Data / Messages referring to this rule of management:

N°	Data	Message
10	Refusal reason code	MT503

4.66. 606 – “Contested field number invalid or missing”

If the "contested field number" is filled in, it must be valid.

Data / Messages referring to this rule of management:

N°	Data	Message
11	Contested field number	MT503

4.67. 609 – “Transaction notice pre-accepted”

If the transaction notice type is 'P' (pre-accepted), no agreement or refusal must be sent.

Data / Messages referring to this rule of management:

N°	Data	Message
5	B5: Transaction code	MT502
5	B5: Transaction code	MT503
5	B5: Transaction code	MT510
9	Transaction notice type	MT510

4.68. 614 – “Transaction type and original transaction type do not match”

If the 'Original transaction code' is 'E' (Exercise of negotiable options) or 'A' (Assignment of a negotiable option), then the transaction type must either be:

- a cash buy or sell (AC or VC);
- a deferred settlement service buy or sell following an exercise of options (ARMV or VRMV); or
- a deferred settlement service buy or sell following an assignment of an option (ARMA or VRMA).

Data / Messages referring to this rule of management:

N°	Data	Message
18	Transaction type	MT510
19	Original transaction	MT510

4.69. 617 – “Market member authorised agent code incorrect”

For ordinary transaction notices (transaction nature = "C"), when the transaction notice is issued by an indirect party market member, the market member authorised agent must be input and correspond to its authorised agent's code at the intended settlement date in the security's CSD of reference.

When the market member is a direct participant, this field can be filled in with the code of the market member.

If the market member authorised agent code is not filled in for the direct participant, PTCS considers that the imputation is made on the code of the market member. For transaction notices without settlement (transaction nature = 'S') this field is optional. If it is filled in, it must correspond to the code of the indirect party's authorised agent on the intended settlement date.

Data / Messages referring to this rule of management:

N°	Data	Message
----	------	---------

57	Market Member Authorised Agent code	MT510
	Participant code	MT510
22	Settlement date	MT510
70	Transaction nature	MT510

4.70. 700 – “Sender ID missing”

The sender ID must be filled in.

Data / Messages referring to this rule of management:

N°	Data	Message
1	B1: Sender ID	MT502
1	B1: Sender ID	MT503
1	B1: Sender ID	MT510

4.71. 707 – “Receiver ID missing”

The receiver ID must be filled in.

Data / Messages referring to this rule of management:

N°	Data	Message
----	------	---------

3	B3: Receiver ID	MT502
3	B3: Receiver ID	MT503
3	B3: Receiver ID	MT510

4.72. 730 –Quantity unit invalid or missing

For transaction notices concerning the security code which is present in the security reference database, the 'quantity unit' present in the transaction notice must be the same as used in the security reference database.

Data / Messages referring to this rule of management:

N°	Data	Message
26	Quantity unit	MT510
17	Security code	MT510
27	Traded securities quantity	MT510

The quantity unit code must be filled in and valid.

Data / Messages referring to this rule of management:

N°	Data	Message
26	Quantity unit	MT510

4.73. 733 – “Securities quantity = 0”

The 'Traded quantity' must not equal zero.

Data / Messages referring to this rule of management:

N°	Data	Message
27	Traded securities quantity	MT510

4.74. 734 – “Traded securities quantity not numerical”

Traded securities quantity must be numerical.

Data / Messages referring to this rule of management:

N°	Data	Message
27	Traded securities quantity	MT510

4.75. 736 – “Securities quantity is not a multiple of nominal value”

When the transaction notice ‘Quantity unit’ is filled in with FMT, the traded securities quantity must be a multiple of the nominal value of the security.

Data / Messages referring to this rule of management:

N°	Data	Message
26	Quantity unit	MT510
27	Traded securities quantity	MT510

4.76. 741 – “Execution or trade date not numerical”

The trade date must be numerical.

Data / Messages referring to this rule of management:

N°	Data	Message
24	Trade date	MT510

4.77. 758 – “COMMISSION amount not numerical”

COMMISSION amount must be numerical.

Data / Messages referring to this rule of management:

N°	Data	Message
35	Amount	MT510

4.78. 780 – “Invalid security code”

Transaction notices without settlement (transaction nature = “S”), can concern a security code which may or may not be admitted to the PTCS securities database or the PTCS settlement securities database.

Transaction notices with settlement (transaction nature = 'C' or space) must concern a security code which is admitted to the PTCS securities database or the PTCS settlement securities database.

Data / Messages referring to this rule of management:

N°	Data	Message
17	Security code	MT510
70	Transaction nature	MT510

4.79. 900 – “The message could not be parsed”

The message cannot be parsed by PTCS.

Messages referring to this rule of management:

System	Message
PTCS	MT510 MT502 MT503

4.80. 910 – “Number of postponements exceeding the maximum limit”

The number of postponement requests (DSS) for a specific transaction exceeds the maximum PTCS limit (> 3 attempts).

Messages referring to this rule of management:

System	Message
PTCS	MT510

4.81. 930 – “Invalid Link for Broker and Custodian”

PTCS received a message where Broker and Custodian parties are not linked in the system.

Messages referring to this rule of management:
