1. Executive summary

This document describes the Danish Tax Reporting Service provided by Euronext Securities Copenhagen in support of Danish tax reporting obligations.

The service supports the preparation, validation, generation, submission and correction of selected Danish monthly and yearly tax reports to the Danish Tax Agency / Skattestyrelsen (DTA). It also supports related operational activities, including data validation, report status management, feedback handling, and correction workflows.

The service is intended to provide a structured and controlled reporting process for Danish tax reporting. It supports traceability from collected source data through report generation, submission, feedback and, where required, correction and resubmission.

The service does not constitute legal advice, tax advice, regulatory advice or financial advice. Clients and relevant service participants remain responsible for their own obligations, data quality responsibilities and internal assessments where applicable.

The legal responsibility for compliance with Danish tax reporting requirements, including the accuracy, completeness, and timely submission of reports, remains with the reporting party or, where applicable under the Danish Tax Reporting Act, with Euronext Securities Copenhagen in cases where an independent statutory reporting obligation applies. Euronext Securities Copenhagen otherwise acts as an operational service provider facilitating the preparation and transmission of reports on behalf of the reporting party and does not assume any additional statutory reporting obligation or liability.

2. Introduction

Danish tax reporting requires timely and accurate reporting of selected securities, account, investor, income, holding and transaction information to the Danish Tax Agency.

Euronext Securities Copenhagen supports these reporting obligations through a Danish Tax Reporting Service covering both monthly and yearly reporting processes. The service includes capabilities for collecting and validating relevant reporting data, generating tax reports in applicable DTA formats, submitting validated reports, receiving DTA feedback and supporting correction handling where required.

3. Service overview

The Danish Tax Reporting Service supports the end-to-end lifecycle for selected Danish monthly and yearly tax reporting.

At a high level, the service includes:

- collection of relevant monthly and yearly reporting data;
- validation and completeness checks;
- creation of controlled source-data snapshots;
- management of price, exchange-rate, assessment-rate and market-value data;
- generation of monthly and yearly tax reports;
- submission of validated reports to the Danish Tax Agency;
- receipt and processing of DTA technical and business feedback;
- processing corrections;
- generation of corrected reports where required;
- role-based access control, audit trail, archiving and retrieval.

Service component	Covered by the service
Monthly source-data collection	Covered
Yearly source-data collection	Covered
Price, assessment-rate, exchange-rate and market-value management and distribution	Covered
Monthly tax report generation	Covered
Yearly tax report generation	Covered
Submission orchestration to DTA	Covered
Technical file-transfer integration with DTA	Covered
Receipt and feedback handling	Covered
Issuer Agent corrections	Covered
SAC corrections	Covered
Corrected report generation and resubmission preparation	Covered
Client-specific tax advice	Not covered
Client-specific legal advice	Not covered
Client-specific impact assessment	Not covered
Implementation of clients' internal tax processes	Not covered
Implementation of upstream source systems	Not covered
Reporting of beneficial owners in omnibus accounts	Not covered

Note: Clients interested in a service supporting omnibus / nominee account structures are encouraged to contact Euronext Securities as soon as possible.

4. Standards and market practices

This service is provided in accordance with Euronext Securities Copenhagen's authorisation under the Central Securities Depositories Regulation (CSDR). Danish tax reporting services constitute a non-banking-type ancillary service as defined in Section B of the CSDR Annex and are delivered within Euronext Securities Copenhagen's authorised scope.

The applicability of the service depends on the client custody model. For clients operating under a segregated account model, the Danish tax reporting service is provided as part of the standard service offering. For clients operating under an omnibus account model, the service may, subject to agreement, either be performed by Euronext Securities Copenhagen on behalf of the client or insourced by the client.

Where Euronext Securities Copenhagen performs the service, it acts on behalf of the relevant reporting party within the agreed service scope. Where clients elect to insource the reporting, they retain full operational responsibility for the reporting process.

The service is based on relevant guidelines from the Danish tax authority and Euronext Securities Copenhagen operational procedures.

Unless otherwise agreed or specified, the service follows these principles:

- reporting is performed on behalf of the reporting party using applicable DTA formats;
- report generation is based on validated source-data snapshots;
- report files are subject to data and format validation before submission;
- DTA technical receipts are distinguished from DTA business feedback;
- feedback and rejected records are made available for operational follow-up and correction handling;
- corrected data and corrected reports are handled through controlled and auditable processes;
- access to data and functionality is based on role and entitlement.

The service is designed to support Danish tax reporting processes and does not replace or assume clients' legal, tax, compliance or operational responsibilities, including the statutory reporting obligation where applicable.

5. Actors involved in the service

The service involves a limited number of actors. The main actors are listed below.

Actor	Role
Euronext Securities	Provides and operates the Danish Tax Reporting Service.
Danish Tax Agency	Receives submitted tax reports and provides technical receipts, statuses and feedback/error-list files.
Securities Account Controller	Provides or corrects all information related to the Danish Tax Reporting Service.
Issuer Agent	Provides or corrects issuer, instrument, corporate-action, dividend/distribution, price or assessment-rate data within its responsibility area.

6. Service scope

Terms	In scope	Out of scope
Monthly reporting	Collection, validation, snapshot creation and report generation for selected monthly dividend and distribution reporting.	Reporting formats or data domains not confirmed as part of the service.
Yearly reporting	Collection, validation, snapshot creation and report generation for selected annual Danish tax reporting.	Reporting outside the agreed Danish tax reporting scope.
Price and valuation data	Collection, validation, correction and storage of price, assessment-rate, exchange-rate and market-value data used in reporting.	General market data services outside tax reporting needs.
Submission	Controlled submission orchestration for validated reports to DTA.	Client-side submission or reporting processes outside Euronext Securities Copenhagen.
DTA integration	Technical file transfer, receipt handling, feedback retrieval and technical monitoring.	Business interpretation beyond the agreed feedback and correction process.
Corrections	Correction requests, corrected-data handling, impact assessment and corrected report generation where required.	Corrections unrelated to Danish tax reporting.

7. Service lifecycle

7.1 Data collection

The service collects relevant monthly and yearly data required for Danish tax reporting. This may include account, investor, securities, holding, transaction, dividend, distribution, corporate-action, price, exchange-rate, assessment-rate, market-value and beneficial-owner data where applicable.

7.2 Data validation and snapshot creation

Collected data is validated for completeness and consistency. Once data is eligible for reporting, the service creates a source-data snapshot. The snapshot provides the controlled data basis for report generation and later traceability.

7.3 Price and valuation data management

The service manages price, assessment-rate, exchange-rate and market-value data required for tax reporting, including distributing EOY prices to market participants.

7.4 Monthly report generation

Monthly reports are generated from validated monthly source-data snapshots. The service applies relevant reporting rules, performs data and format validation, stores generated reports and updates report status.

7.5 Yearly report generation

Yearly reports are generated from validated yearly source data snapshots. The service applies relevant annual reporting rules, performs data and format validation, stores generated reports and updates report status.

7.6 Submission to the Danish Tax Agency

Reports that have passed required validations are prepared for submission to DTA. Submission is performed through the agreed technical channel (STFP/API), with submission status and technical receipts recorded for traceability.

7.7 Receipt and feedback handling

The service receives and stores technical receipts and DTA feedback/error-list files and shares the feedback with SACs through the agreed technical channel (STFP/API). Feedback is linked to submitted reports where possible and made available for operational review and correction handling.

7.8 Correction handling

Where missing, incorrect or amended data is identified, U2A correction workflows may be initiated with the relevant party. Corrections may involve Issuer Agents, SACs or Business Operations, depending on the data domain.

7.9 Corrected reports and resubmission preparation

Where corrected data affects generated or submitted reports, the service supports impact assessment and corrected report generation. Corrected reports are validated and, where eligible, made available for resubmission.

8. Glossary

Below is a definition of terms used in this document.

If not otherwise specified:

- All times used in this document are in Central European Time (CET);
- "We", "our" and "us" refer to Euronext Securities.

Term	Definition
DTA	Danish Tax Agency / Skattestyrelsen.
ES-CPH	Euronext Securities Copenhagen.
SAC	Securities Account Controller; an entity operating securities accounts on behalf of investors.
Issuer Agent	Entity acting on behalf of an issuer.
Tax System	System supporting Danish tax reporting data collection, validation, report generation, submission, corrections and audit.
Source-Data Snapshot	Controlled data set used as the basis for report generation and traceability.
Market Claim	Settlement or corporate-action-related claim information that may affect dividend reporting.
Assessment Rate	Tax-relevant valuation rate used in reporting or market-value calculation.
Market Value	Value calculated from holding quantity, price, exchange rate and applicable valuation rules.
Technical Receipt	Technical acknowledgement or status related to file transfer.
DTA Feedback	Feedback from DTA, including business feedback and error-list files.
Correction Request	Request for missing, corrected or confirmed data.
Corrected Report	Report generated to correct or amend a previously generated or submitted report.
Correction Mode	Method used for correction, such as regeneration, amendment, replacement, cancellation or delta reporting.
Entitlement	Permission or access right assigned to a user, role, organisation or party relationship.

Data Scope	Restriction defining which issuers, SACs, accounts, instruments, reports, periods or correction cases a user may access.
